

New construction inspections

Prior to your final walk through with the Builder's Customer Service Representative or Superintendent a new construction inspection should be performed. The inspection should be scheduled just a day or two before your final walk through with the builder. To ensure that most, if not all, last minute items have been completed prior to your inspection, please verify that all utilities (gas, water, and electric) have been turned on, either by you or the builder depending on the builder's policy. At the conclusion of the inspection a 400-point professional report will be created for you showing any items that may need attention.
