Why Choose AENEC?

STAYING ON TREND

AENEC is a well-established and known business in the industry and we are committed to being at the forefront of latest trends and latest developments through membership accreditation and CPD programs.

SUSTAINABILITY

AENEC cares about leaving a low environmental footprint and our philosophy is to find technical solutions for each project that are both cost effective and environmentally friendly.

TECHNICAL DETAILS

At AENEC we focus on quality and consistency and we work with the best modelling software packages in the industry; For NatHERS, AccuRate Sustainability and Fine4RATE CAD interface are used. We normally work with DWG and IFC format to extrapolate information to the modelling software for accurate and reliable assessments to the accuracy of 1 millimetre.

All of our data is backed-up daily and available to us at any time.

Most of our competition uses drawing print-outs and takes measurements of walls, floors and everything else with the ruler, whilst we are using CAD software.

Clients

Over 10% of our current volume of work comes from new clients that have already had BASIX/NatHERS completed by other consultancy firms, however these firms either are no longer available or not interested in helping out their clients. So, these new clients have to pay AENEC to start all over again the process just because a small amendment is needed! Don't get caught and go for someone that will not be there for you if/when you need to have your project amended either because you or council wants to. We are 100% committed to our clients.

Mission

AENEC (Australian Energy Efficiency Consulting) is an Australian owned company servicing the building sustainability industry and BCA compliance for over 6 years.

Our very varied clients range from small architectural firms, small to large building companies to larger architectural firms and prime building developer companies all the way to one off owner builders.

We pride ourselves in using state of the art technology and engineering techniques and our 100% success rate in terms of council submissions.

We believe in the importance of providing high quality assessments and recommendations to ensure your projects are done the best way possible.

We aim to make developments meet the minimum performance standards by using the most economical in terms of thermal performance materials/components based on the design parameters. When needed, we will recommend adjustments of materials/components in order to achieve the desirable results, for the respective project.

“AENEC is passionate about the environment and the reason for its foundation was this. What we really thrive on, is to provide the best possible service for your project in regards to the energy efficient design and technologies without compromising the overall design and the project’s budget.”
