GLOBAL COMMUNITY FOR INNOVATIVE SMART TRANSPORTATION

EcoMotion is a dynamic community with over 600 start-ups (constantly growing) and 7,000 community members in the field of Smart Transportation. Understanding start-ups do not grow in a void, we bring together entrepreneurs, academics, government officials, local & global automotive industry representatives, investors and much more; providing a support platform for knowledge-sharing, networking and collaboration.

Our mission is to support the growth of the Israeli Smart Transportation sector and enhance the implementation of innovation in our field, while simultaneously, positioning Israel as a global innovation center for Smart Transportation.

EcoMotion has an extensive innovation toolkit to support public and private sector organizations in the implementation of innovation, such as: Challenge Competitions, Adaptathons, Networking Events and more!

- Innovation Exhibition
- Meet & Interact
- Israeli Innovation
- Over 600 Startups
- 7,000 Community Members
- Annual Main Event

EcoMotion is a non-for profit organization and a joint venture of the Israel Innovation Institute, Fuel Choice and Smart Mobility Initiative (Prime Minister's Office), Ministry of Economy and the Israeli Automotive and High-Tech industries.

5 SECTORS:

AUTONOMOUS & CONNECTED |

ELECTRIFICATION & ENERGY

Orly Dahan
Executive Director, Ecomotion
Israel Innovation Institute

We are lucky to live in the greatest convergence of transportation and technology in history. Thoughts, ideas and visions about the future of mobility are now becoming reality - the present. Now is the time to transition to the 'ING' phase - the doing, the making, the Reshaping of The Transportation Landscape.

Over the past year we have witnessed the EcoMotion community grow tremendously and startups' technologies increase exponentially, embracing know-how and technologies from multiple industries.

When reshaping the transportation landscape, we should keep in mind that mobility is a necessity for all: urban and rural residents, commuters, travelers, students, the elderly and underserved communities. Keeping in mind one simple idea - Individuals in 2018, each having their own personalized need for mobility.

From alleyways to the highways, from the parking spot to the skylines, we each have a part in bringing innovations from presentations to reality. Our powerful and unique community is the driver for change toward the world we want to live in.

I would like to welcome you to the 6th EcoMotion Main Event, invite you to explore our community to the fullest and integrate Israeli innovation in your future endeavors. A big THANK YOU to all the Partners who made this event possible.

Wishing you all tremendous success and relentless courage to keep on growing and moving forward as rapidly as transportation itself!

Dr. Jonathan Menuhin
Executive Director
Israel Innovation Institute

Reaching the 'tipping point' for Smart Mobility Technology to shape our lives is a primary quest for the Israel Innovation Institute. There are three critical factors to realizing this tipping point:

- Availability of breakthrough technologies: those with true potential for changing the way we drive and transport, act and manage in the transportation arena. The EcoMotion Main Event is presenting state of the art, new technology and a novel vision for transportation.
- Growing demand for these technologies: each level of government around the world including Israel understands the crucial need to prepare for the breakthrough of autonomous vehicles for the future of smart cities. Participating in conferences like this, they are learning the advantages of innovative technologies as well as the challenges and barriers to implementation.
- Ensuring the necessary resources: fueling the growing numbers of brilliant minds in the mobility ecosystem, we are expanding access to information on the vast range of funding opportunities from government, investors, private and corporate venture capital.

The Israel Innovation Institute is committed to support the development and implementation of breakthrough technologies, working to achieve its vision - Transforming innovation to serve society. EcoMotion, an arm of the Israel Innovation Institute, is pursuing the mission to grow Israel's Smart Transportation sector and enhance the implementation of innovation in the field, while simultaneously, positioning Israel as a global innovation center for Smart Transportation.

Dr. Anat Bonshtien

Active Chairman and Director,
Fuel Choices and Smart Mobility Initiative , Prime Minister's Office

It is a great pleasure for us to welcome you all to the 6th EcoMotion event. It is with great pride that I see how EcoMotion has evolved and what it has achieved during the last six years.

When we first launched EcoMotion, the community was composed of approximately 50 entrepreneurs, drinking beer on the beach and discussing the future of transportation. This was still a time when “autonomous” and “smart mobility” were terms relatively new to the local ecosystem. Six years later and here we are today, with more than 500 companies in all the areas of smart, clean and efficient mobility, billions of dollars invested in the local ecosystem, 300 research groups and a tremendous growth in interest of the leading multinational companies in the mobility sector. Thanks to the global digitalization of the transportation sector and Israel's strong entrepreneurial spirit and start-up scene, coupled with the regulatory and financial support provided by the Israeli Government, orchestrated by the Fuel Choices and Smart Mobility Initiative within the Israeli Prime Minister's Office, Israel is undoubtedly in the spotlight, and has become a significant global player in this field.

We believe that when you shake and stir the right components and as a government provide the right set of tools - the scene is set for thriving innovative solutions!

We hope you enjoy the 6th EcoMotion event, and invite you all to attend our Annual Smart Mobility Summit in Tel Aviv, Israel on the 29th-30th of October 2018.

Oded Distal

Director, IsraelNewTech and ecosystems
Ministry of Economy and Industry

Welcome to EcoMotion 6th Main Event!

As many of you know, Israel is a hub for innovation and powerhouse for pioneering technologies. Israeli thinkers, makers and doers are changing the world in fields like health, internet, security and today- also Automotive and mobility.

While Israel does not have a native auto manufacturing, it does excel in the automobile smart technology sector. With more than 1,400 new startups every year, 300+ multinational corporations active in Israel, thousands of entrepreneurs and a comprehensive business ecosystem, no wonder global auto manufacturers and tech giants are looking at Israel while creating the next generation of smart vehicles. Leading OEM's and tier 1&2 companies are turning to Israel to develop cutting edge technologies to deck out their latest products, and playing a key role in the Israeli ecosystem. We welcome all of them and proud to be part of the future mobility revolution.

We at IsraelNewTech in the Ministry of Economy and Industry support EcoMotion, the smart transportation community in Israel as well as many more sectorial communities as we believe the traditional model of innovation has been undergoing fundamental changes. We support the industry and entrepreneurs in their attempt to cope with global trends, which will change the lives of all of us, by creating business opportunities, engaging partners from all sectors and developing the ecosystem by community building. Together with global and strategic partners, we will be able to shape a brighter future for all of us.

I wish you all from Israel and abroad, a fruitful and enjoyable event.

NoTraffic is developing a turnkey traffic management platform powered by Vehicle-to-Infrastructure (V2I) communication & real-time optimization of signalized intersections. Within one hour, our system transforms every signalized intersection - to a smart one. According to the city's preferences, using novel ETA optimization algorithms, the system autonomously optimizes traffic signal timing in order to maximize traffic flow, prioritize different types of vehicles, reduce congestion and prevent accidents.

Lear Corporation's strategic vision identifies and champions three mega-trends that have emerged as major drivers of change and growth in the automotive industry: electrification, connectivity and convergence. With 165,000 global team members, we deliver content to more than 400 vehicle nameplates for almost every major automaker in the world.

Our E-Systems business segment is a global leader in managing power and distributing signals within a vehicle for traditional electrical architectures as well as emerging high power and hybrid electric systems. Lear has more than 19 first-to-market innovations in the last 36 months, added industry experts in cybersecurity, and enhances data movement from vehicle-to-vehicle and vehicle-to-infrastructure.

Current updates by our leading cybersecurity team include:

- Establishing a secure next-generation reference platform for our connectivity products that comes with the highest level of security enabled, including hardened operating system, secure boot, software sandboxing, firewalls, intrusion detection, software updates, and more.
- Developing a smart firewall for our gateways and connected gateways that detects and stops all known network-based attacks; we collaborate with major industry leaders to add more detection mechanisms to our gateways and run analytics over suspicious data in the cloud.
- Refining our processes allow us to keep products secure over their life-time and effectively respond to security incidents.

Lear's ConnexUs™ suite of solutions guarantee secure network-integrated communications, delivering state-of-the-art signal and data management to

vehicles. Our expertise in on-vehicle network management coupled with the latest in communications technologies and a dedication to cybersecurity enables advanced connected car solutions such as Over-The-Air software upgrades, remote commands, diagnostic management, car-sharing solutions, and safety advancements utilizing V2X communications.

As the global leader in V2X technology with more than 20 international and domestic infrastructure deployments, Lear provides the most advanced communications capabilities between vehicles and infrastructure. Advanced software algorithms can identify potential safety hazards beyond the line of sight improve situational awareness and decision-making time.

The first Tier 1 supplier to integrate Ethernet communications networks on board a production vehicle, Lear also offers the world's most technologically advanced gateway modules. Electrical architecture optimization helps ensure efficient highspeed networks with reduced mass, delivered right the first time by the Lear Virtual Proving Grounds, our industry-leading simulation capabilities.

With power electronics and high power electrical distribution including 48V architectures, our advanced power management solutions for highly electrified vehicles allow vastly more efficient mobility, reflecting our global team's commitment to deliver leading-edge advances. Through

internal seamless collaboration, advanced electronics, and communications technologies integration, Lear Seating will be the first, most important point of connectivity. Our advanced seating systems are the perfect location to embed advanced sensors and systems to deliver dynamic safety solutions, comfort, and personalization.

Ranked #151 on the Fortune 500, a 100-year heritage of innovation and transformation, Lear Corporation consistently demonstrates its dedication to combining creative collaboration and expertise in delivering to the global marketplace.

PLATINUM PARTNERS

• APTIV •

We are Aptiv - a new technology company with a proven history of enabling mobility. As Aptiv, our vision is to be the partner of choice in delivering safe, green and connected solutions to our customers, providing the integrated brain and the nervous system of the vehicle.

New mobility has ushered in a technology revolution, making automotive one of the fastest new technology growth areas that companies - from established tech giants to new start-ups - are rushing to enter, Aptiv excels by providing automotive-grade solutions, which meet the exceedingly tough demands of automotive customers. The road reimaged will include new automated transportation models and will provide mobility-on-demand.

Aptiv is pioneering the way with the recently announced partnership with Lyft in Las Vegas and the growing programs in Singapore. Automated mobility-on-demand and the supporting data management and connectivity platforms require the full knowledge of both the vehicle and the infrastructure environments. Few companies have the inherent capability and bandwidth to excel at both. Aptiv does.

Advanced computing platforms and software are taking vehicle safety and fuel efficiency to levels never before imagined. A car today has at least twice the lines of computer code of an F-35 fighter jet and is easily the most sophisticated electronic device you own. Aptiv delivered more than 30 billion lines of code a day last year. This year we will exceed 50 billion lines of code per day. To harness this power, advanced computing platforms and high-speed data electrical architectures are required to connect the dozens of on-board computers that run today's vehicles.

Aptiv's Multi-Domain Controller - the industry first - enables the massive

computing power needed for active safety and advanced driver assistance systems. This powerful control center reduces system complexity, cost and weight. Similarly, our breakthrough Integrated Cockpit Controller connects multiple computers, screens and connectivity nodes to enable all the driver and passenger information, entertainment and connectivity experienced in the vehicle. Both of these advanced computing platforms are linked by Aptiv's advanced electrical architectures and connectivity, future-proofing the vehicle by enabling manufacturers to upgrade new features after the vehicle has left the lot.

"Making it possible" remains Aptiv's steadfast commitment. Backed by the most relevant competitive portfolios of advanced technologies in the industry, Aptiv employees around the world are innovating and executing with excellence each and every day. Aptiv's advanced technology solutions continue to help the world to significantly reduce the number of car accidents and fatalities. Aptiv will continue to develop new market-relevant technologies that enable new mobility solutions, while at the same time, aggressively expanding our capabilities in software development, systems integrations, and data analytics.

Deloitte.

Deloitte is a leading global provider of audit & assurance, consulting, financial advisory, risk advisory, tax and related services. Our network of member firms in more than 150 countries serves four out of five Fortune Global 500® companies.

Future of Mobility - Deloitte's Future of Mobility practice draws on deep cross-sector expertise to help companies navigate and lead technological advancements in transportation, including autonomous vehicles and new transportation systems. Informed by Deloitte's analysis, the Future of Mobility team provides transformative insights, driving sustained value for Deloitte's clients, including:

- 1) Transforming your business - We help design differentiated, compelling customer experiences, accelerate strategic innovation, build and test the business case, redesign operating models, and architect solutions to solve the most vexing mobility challenges.
- 2) Engineering the ecosystem - We understand the societal, regulatory, and technical complexities of the new mobility ecosystem and can help orchestrate all the key stakeholders in developing collaborative, inclusive pilots and platforms solutions.
- 3) Driving new analytics solutions & platforms - We can help drive smarter insights and stronger outcomes through better mobility data management, advanced analytics, and digital capabilities. Visit: www.deloitte.com/futureofmobility

Innovation Tech Terminal - Deloitte's Innovation Tech Terminal (ITT) is a platform for collaboration between MNCs and the Israeli innovation ecosystem. With a dedicated team in the US and Israel, ITT can amplify an MNC's ecosystem strategy by offering curated in-country client experiences (Immersion Labs), local capability development (Soft Landing), and tech scouting services. For Israeli startups, ITT provides unique value added services across the entrepreneurial lifecycle, from early stage to fast growth. For more info on Deloitte ITT, contact Yuval Fisher, Mobility Domain Manager (yfisher@deloitte.co.il). Learn more at Deloitte.com

GOLD PARTNERS

With a workforce of some 30,000 automotive professionals across the Americas, Europe, and Asia, HARMAN designs and engineers connected products and solutions for automakers, consumers, and enterprises worldwide. HARMAN's broad-array of cutting-edge products includes digital cockpit systems, Remote Vehicle Updating over-the-air (OTA) solution, audio products, SHIELD Cybersecurity Solution and IoT services. In March 2017, HARMAN became a wholly owned subsidiary of Samsung Electronics Ltd.

Audiophiles from every generation call on HARMAN to deliver the best in sound in the studio and on the stage, in the car, at home and on the go. HARMAN's portfolio of legendary audio brands includes AKG®, Harman Kardon®, Infinity®, JBL®, Lexicon®, Mark Levinson® and Revel®.

Since 2012, HARMAN has made significant and ongoing investments in Israeli technology, including the acquisitions of iOnRoad, Redbend and TowerSec. HARMAN Automotive Cybersecurity is a full service global business unit that has deep experience in traditional IT security and embedded security, as well as several years of pioneering work in automotive cyber security. HARMAN's Remote Vehicle Updating offering is the only OTA solution that enables efficient full-vehicle management, already chosen by 18 OEMs to enable secure OTA software updates to more than 30 million vehicles.

In November 2017, HARMAN has announced the launch of the International Cyber Security Smart Mobility Analysis and Research Test (SMART) Range in Israel, in cooperation with Ben-Gurion University of the Negev. HARMAN has been an active member of industry institutions - such as Auto-ISAC, SAE/ISO, Jaspas and others - working to enhance cybersecurity awareness, design and deployment across the global automotive industry.

GOLD PARTNERS

Autonomous vehicles, fueled by artificial intelligence (AI) will revolutionize the \$10 trillion transportation industry. AI gives cars the power to see, think, and learn, so they can safely navigate the nearly infinite range of possible driving scenarios. NVIDIA AI computing platforms in the cloud and in the car deliver the performance and capabilities required for self-driving systems. NVIDIA® DGX™ systems are ideal for training deep neural networks in the data center. The NVIDIA DRIVE Constellation™ AV simulator makes it possible to safely drive billions of miles in virtual reality, and validate self-driving systems before they reach the road. And NVIDIA DRIVE™ in-vehicle solutions enable supercomputing for deep learning, sensor fusion, and surround vision to revolutionize the driving experience. The DRIVE AI car computer can understand in real-time what's happening around the vehicle, precisely locate itself on an HD map, and plan a safe path forward. It's also designed around a diverse and redundant system architecture and built to achieve ASIL-D, the highest level of automotive functional safety.

NVIDIA DRIVE is the leading AI self-driving platform—enabling over 370 automakers, truck makers, tier-1 suppliers, mobility service companies, sensor manufacturers, and research institutions to accelerate development and production of autonomous vehicles. Companies including Audi, Bosch, Continental, Mercedes Benz, Tesla Motors, Toyota, Volvo and ZF have all selected DRIVE for their self-driving systems. The major HD mapping companies—Baidu, HERE, TomTom, ZENRIN—are using NVIDIA AI to map the world. And Argo.ai, Aurora, Cognata, Momenta, Zoox and numerous other startup companies are building on NVIDIA AI solutions. The transportation industry is being transformed by NVIDIA AI, both in the data center and in the vehicle.

GOLD PARTNERS

RENAULT NISSAN MITSUBISHI

Groupe Renault, Nissan Motor Company and Mitsubishi Motors represent the world's largest automotive alliance with more than 10.6 million vehicles sold in nearly 200 countries in 2017. It is the longest-lasting and most productive cross-cultural partnership in the auto industry. The partners have strategic collaborations with other automotive groups, including Germany's Daimler and China's Dongfeng. This strategic alliance is the industry leader in zero-emission vehicles and is developing the latest advanced technologies, with plans to offer autonomous drive, connectivity features and services on a wide range of affordable vehicles. Alliance's innovation strategy is focused on reshaping the way we power, drive, and connect our vehicles. Under the Alliance 2022 Strategic Plan, Renault-Nissan-Mitsubishi will launch 12 pure electric models, utilizing common EV platforms and components, while also bringing to market 40 vehicles with autonomous drive technology and developing robo-vehicle ride-hailing services.

The Innovation Lab in Tel Aviv aims to advance the state-of-the-art in mobility, with a main focus on sensors for autonomous driving, big data and cybersecurity. Its mission is to identify and test Israeli technologies that could be implemented in future cars and services offered by the Alliance member companies. The Lab collaborates with the local innovation ecosystem through joint prototyping efforts. Since February 2018, it has operated under the new Technological Labs program of the Israeli Innovation Authority.

The Innovation Lab in Tel Aviv works in close cooperation with Alliance Ventures, a venture capital fund which will invest up to \$1 billion over the next five years. The fund, launched in 2018, operates globally, including in Israel. The fund targets technology and business model innovation. By drawing on expertise and business opportunities of the Alliance, it pursues strategic investments at all maturity stages.

SILVER PARTNERS

ALSTOM

As a promoter of sustainable mobility, Alstom develops and markets systems, equipment and services for the transport sector. Alstom offers a complete range of solutions (from high-speed trains to metros, trams and e-buses), passenger solutions, customised services (maintenance, modernisation), infrastructure, signalling and digital mobility solutions. Alstom is a world leader in integrated transport systems. The company recorded sales of €7.3 billion and booked €10.0 billion of orders in the 2016/17 fiscal year. Headquartered in France, Alstom is present in over 60 countries and employs 32,800 people. Its 8,500 employees in France provide a pool of expertise to serve both French and international customers. A job with Alstom creates about three with its suppliers.

Valens is Israel's largest private semiconductor company. Valens' HDBaseT Automotive is an enabling technology for in-vehicle connectivity, realizing the potential of the connected and autonomous cars. HDBaseT Automotive delivers an advanced solution for the multiGig transmission of multiple native interfaces over a single unshielded twisted pair (UTP) cable, optimizing in-vehicle connectivity.

Addressing the infotainment, ADAS and networking needs in our cars, HDBaseT Automotive leads to overall lower total system costs, with more bandwidth and applications, reduced overall cable length, weight and space, flexible and scalable architectures, while meeting the sector's stringent EMC requirements. More bandwidth, more applications, leaner infrastructure.

SILVER PARTNERS

Tadmor & Co. Yuval Levy & Co.

Tadmor & Co. Yuval Levy & Co. is an elite Israeli law firm. The firm was one of the first in Israel to recognize the trends and connect with key players in Israel's automotive and transportation ecosystem and has since developed a focus on smart transportation and automotive technologies.

Our team, recently recognized by Legal500 for "knowing the transport industry very well" and having "experience acting for start-ups with interests in the transport industry", represents multinationals and funds investing in, and acquiring, Israeli ventures in the transportation and automotive fields. Our firm also represents smart transportation startups, including in autonomous driving, shared transportation, navigation, sensors, parking and smart city applications, as well as leading smart transportation accelerators. Tadmor-Levy is a proud sponsor of EcoMotion's main event for the fourth straight year.

BP Ventures identifies and invests in private, high growth, game-changing technology companies, accelerating cutting edge innovations across the entire energy spectrum. Since 2006, BP Ventures has invested over \$400 million in corporate venturing and has 42 active investments in its current portfolio. In 2017, we invested more than \$90m in five technology companies as diverse as acetylated wood, biojet fuels and artificial intelligence. Our venture portfolio is focused on emerging technologies in oil and gas exploration and production and downstream conversion processes. In addition, we have a renewed strategic focus on five key areas: bio & low carbon products, carbon management, power & storage, advanced mobility and digital transformation. These support BP's commitment to advance the energy transition, balancing the world's growing demand for new energy with the need to reduce emissions.

SILVER PARTNERS

DWF is a global legal business in 3 continents, 10 countries, 25 key locations and with 2,700 people delivering services and solutions that go beyond expectations. We have received various recognition for our work, among others by the Financial Times who named us as one of Europe's most innovative legal advisers. We have extensive experience in handling corporate transactions for Israeli clients and are seen by many Israel-based companies as their trusted advisor in all of their business dealings in Europe. We are especially strong in the automotive & logistic sector and have represented numerous Israeli clients in this area. We are DRIVE TLV's exclusive legal representative in its business dealings in Europe and are a proud and long standing supporter of EcoMotion.

NEXVISION MOBILITY

Nexvision Mobility is a service provider to firms in the Automotive Tech and Smart Mobility space. Our clients are OEMs, Tier-1s, investors, and innovative startups. As advisors, we facilitate investments and commercial partnerships. On the service side, we offer fully managed software R&D (AI/ML) and Marketing services. Headquartered in Japan, with offices in Silicon Valley and Greater China, Nexvision can open doors in major global centers.

SILVER PARTNERS

OSR Enterprises AG is a Swiss based automotive Tier1, founded in 2011 with R&D centers in Israel and Switzerland. OSR has developed the EVOLVER, a Multi-Domain AI Brain, to control and manage autonomous driving and to secure the vehicles' connectivity and network. EVOLVER can port multiple electronic control units' functionalities, into a single multi-domain system, while giving each domain its own AI functionality. Its advanced architecture, high processing power and AI capabilities provides the technology for next generation cars, without compromising on data privacy and cyber security.

OSR's R&D team is comprised of some of the world's leading artificial intelligence and cybersecurity experts including former members of classified technological intelligence units.

Mercedes-Benz

Mercedes Benz R&D Tel Aviv Ltd is a Daimler AG company. Daimler is one of the world's most successful automotive companies. The Daimler Group is one of the biggest producers of premium cars and the world's biggest manufacturer of commercial vehicles. Daimler Financial Services provides financing, leasing, fleet management, insurance, financial investments, credit cards, and innovative mobility services.

As part of the Daimler AG's global network of Research and Development facilities, Mercedes-Benz R&D Tel Aviv was launched last year focusing on Digital Vehicle and Mobility Services. The Tel Aviv hub is led by Ms. Adi Ofek, CEO. The team contributes and supports Daimler's worldwide activities in mobility services and digitalization. In addition to the development and testing of pilot projects, the site establishes and maintains a network of local partners, universities, and high-tech companies.

co-pace

powered by Continental

“Leading the way to future mobility - and beyond”

co-pace connects the Startup world with one of the world's most forward-thinking technology companies - Continental. Beside the “Incubator”, which is an internal program and the “Investment, Venture Capital” arm, a major focus is the so called “co-operation program”. The aim of the program is to broker, empower and leverage connections between emerging companies and corporate departments. Goal is to validate and prototype the solution of the Startup for a specific application of Continental. With this, Continental provides access to expertise, labs, and insights into the current state of technology and business. Continental develops pioneering technologies and services for sustainable and connected mobility of people and their goods with sales of €44 billion and currently employs more than 238,000 people in 61 countries.

GOV & PUBLIC SECTOR

AYALON HIGHWAYS is a government owned company engaged in the management, planning and implementation of urban and metropolitan transportation projects, including those promoting public transportation and reducing the use of private vehicles throughout the country, as well as managing, initiating and developing projects in the world of innovation and transportation technologies and adapting infrastructures to technological developments in vehicles and road facilities.

The Israel Innovation Authority, responsible for the country's innovation policy, is an independent and impartial public entity that operates for the benefit of the Israeli innovation ecosystem and Israeli economy as a whole. Its role is to nurture and develop Israeli innovation resources, while creating and strengthening the infrastructure and framework needed to support the entire knowledge industry.

As such, the Israel Innovation Authority advises the government and Parliament ("Knesset") committees regarding innovation policy in Israel and furthermore monitors and analyzes the dynamic changes taking place throughout the innovation environments in Israel and abroad. The Authority creates cooperation with counterpart agencies to promote technological innovation in the Israeli industry and economy.

Innovation is by far the most valuable resource for the State of Israel, serving as a national asset crucial to economic prosperity. Strengthening the innovation ecosystem is the mission of the Israel Innovation Authority, which seeks to further develop and support technological innovation in Israel through various support tools.
