

FunderMax Launches New Non-Combustible Rain-Screen Cladding Material

FunderMax North America launched its new, non-combustible, rain-screen cladding material earlier this year. The material is named **m.look NCore**. The panel core is comprised of thermosetting resins and mineral fiber, and it has passed ASTM E-136 for non-combustibility. M.look NCore is available in all exterior decors (except NEON) in the NT (satin) finish. The Miller Clapperton Partnership is an approved fabricator and installer of m.look NCore. This new non-combustible material addresses the growing need for buildings that require cladding materials compliant with ASTM E-136. MAX Exterior F-Quality rain-screen cladding panels remain an applicable product for non-combustible construction requiring NFPA285 compliance.
