

How to install Applications to your device using the ARCstream APP Installer

You must have the ARCstream APP Installed on your device to be able to download apps. This is a NEW app and not everyone will have it. To see if you have the app installed on your device.

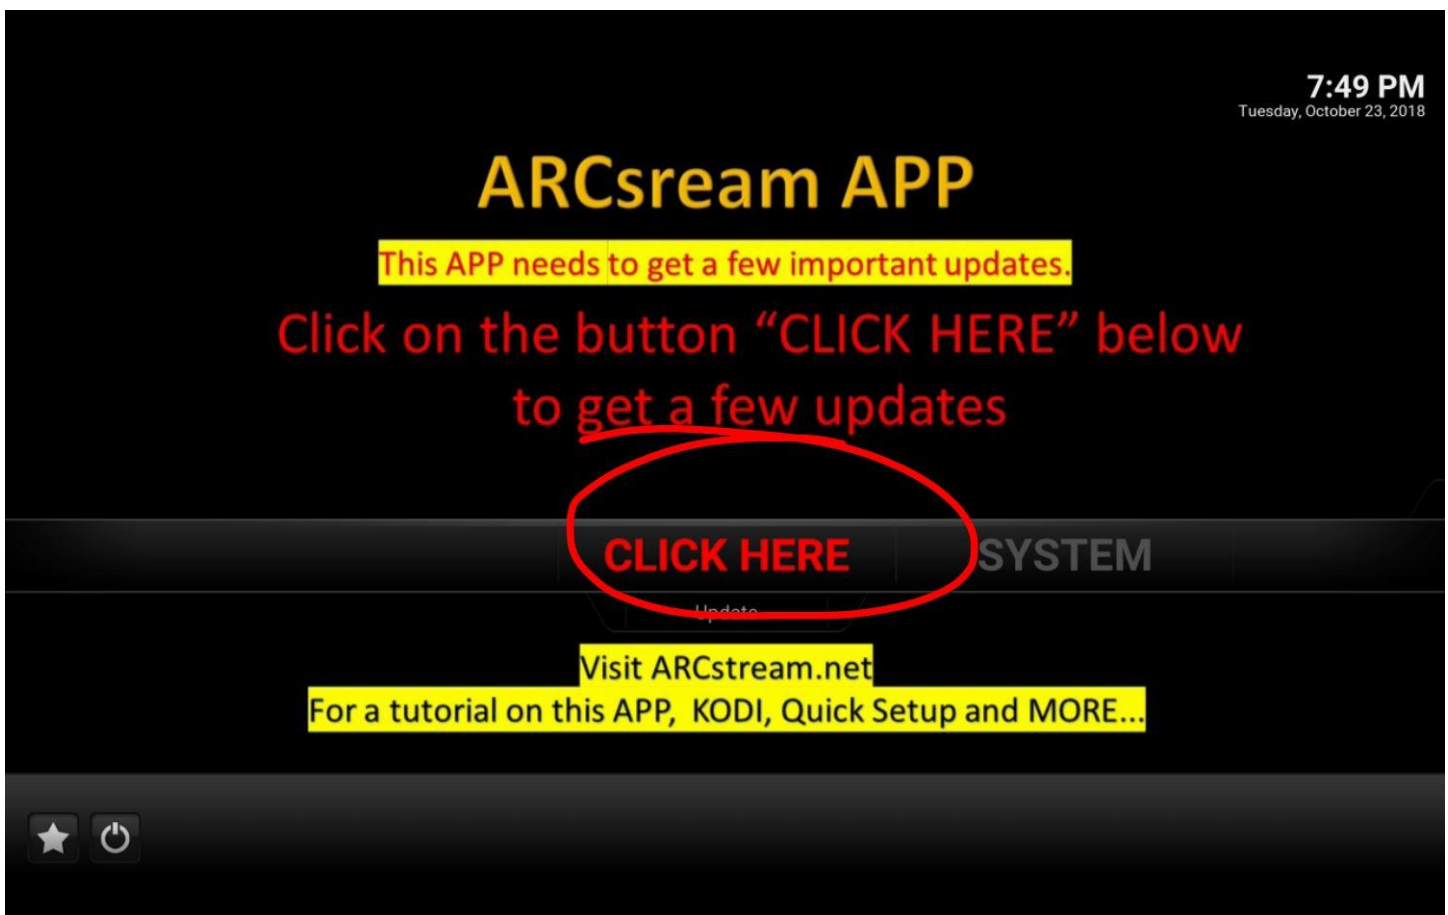

For Amazon devices: click settings, then click Applications, then click on Manage installed applications. You should see ARCstream in the list

For Android Devices: Click on Settings, click on Apps, ARCstream will be in the list if installed.

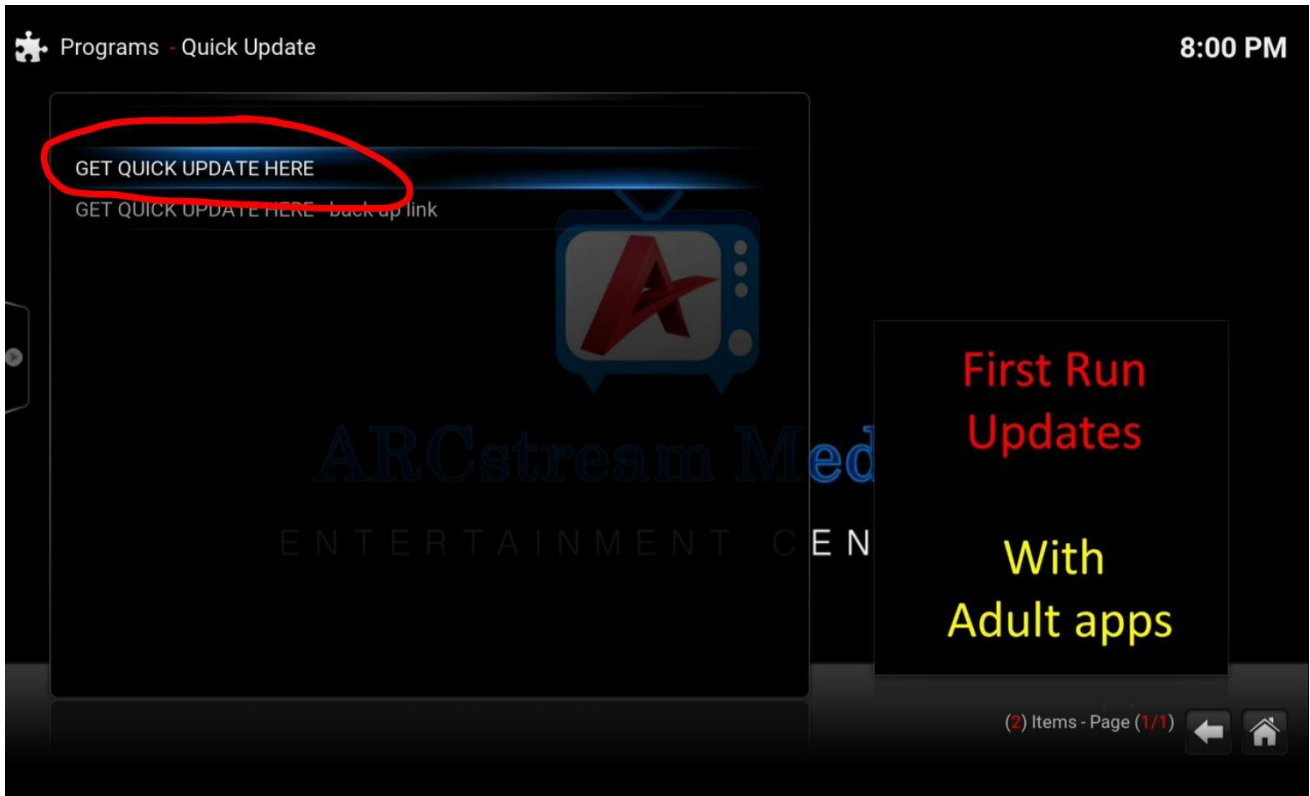

To get the ARCstream app, please visit our website

Open the app: ARCstream.

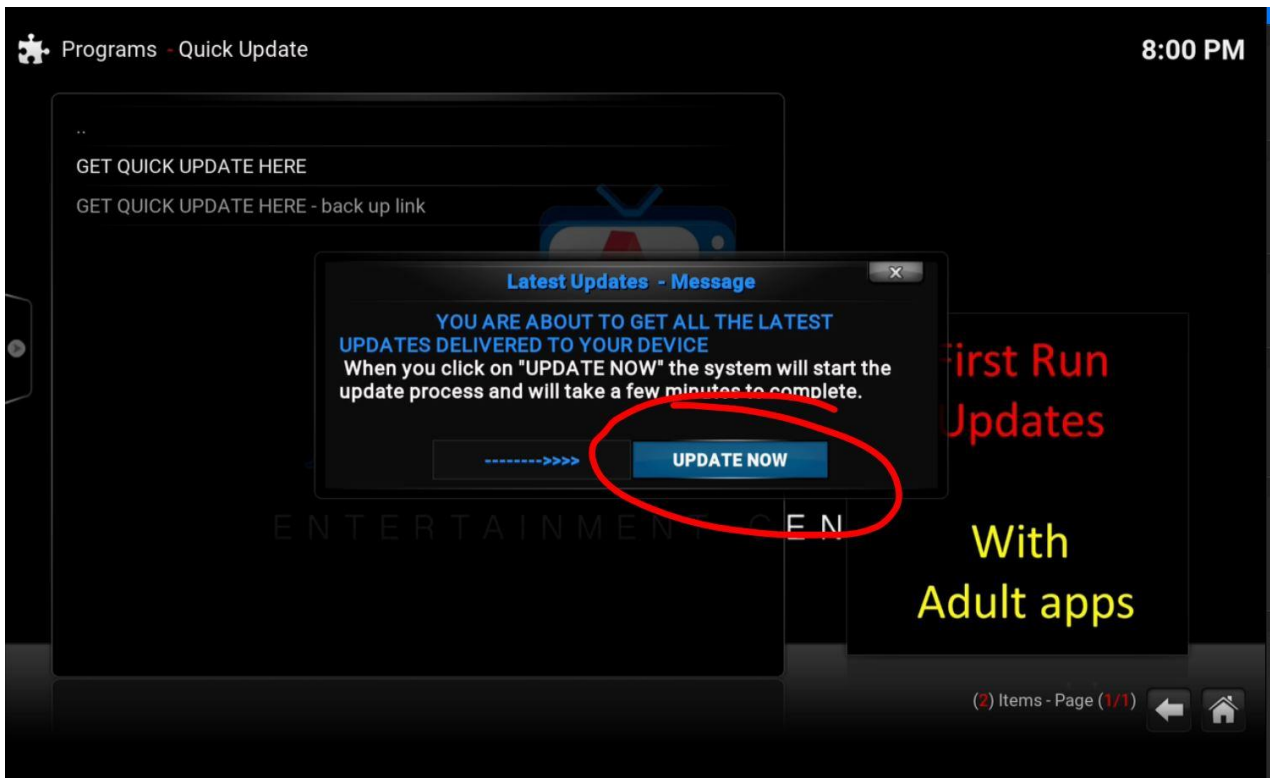

The app may need to get some updates first. Click on “click here” If it does not have this screen skip the next 4 steps.

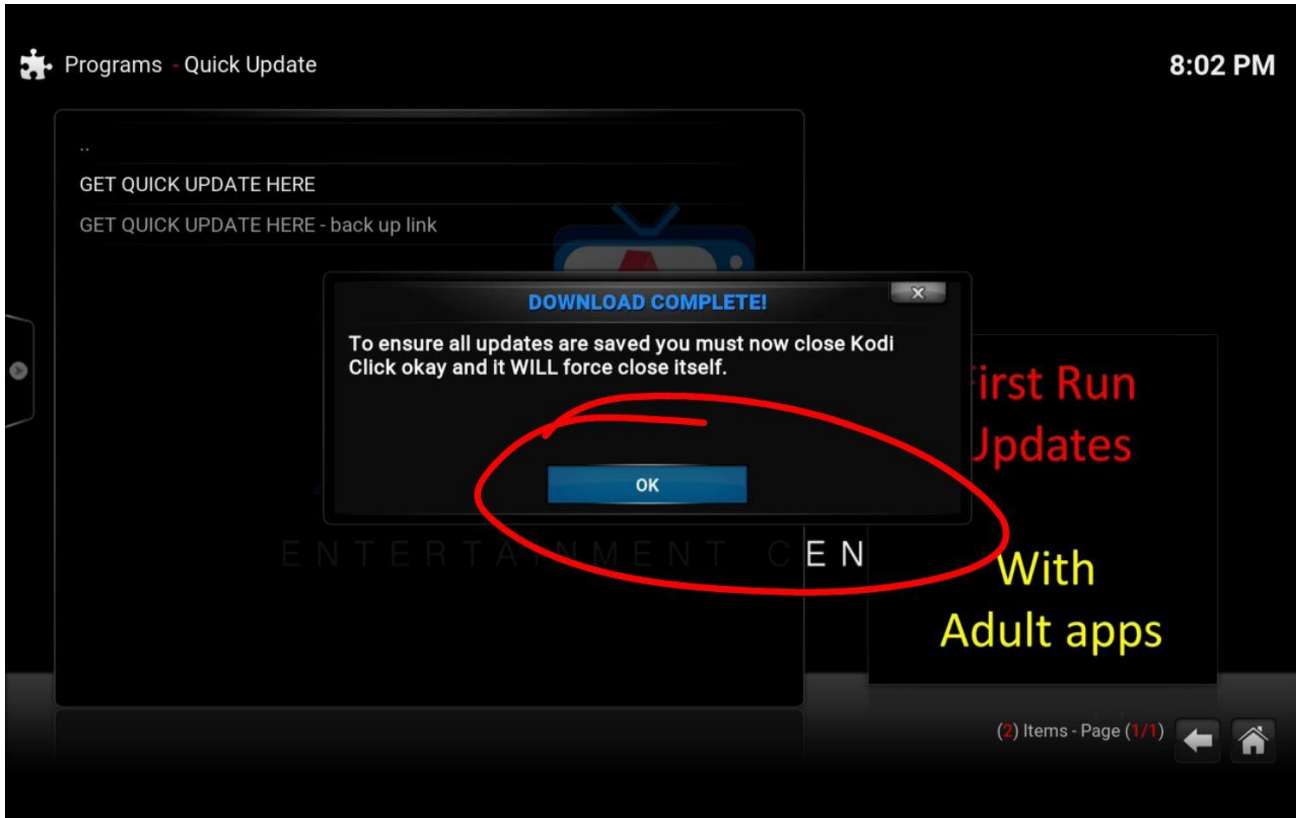

Click on the update link

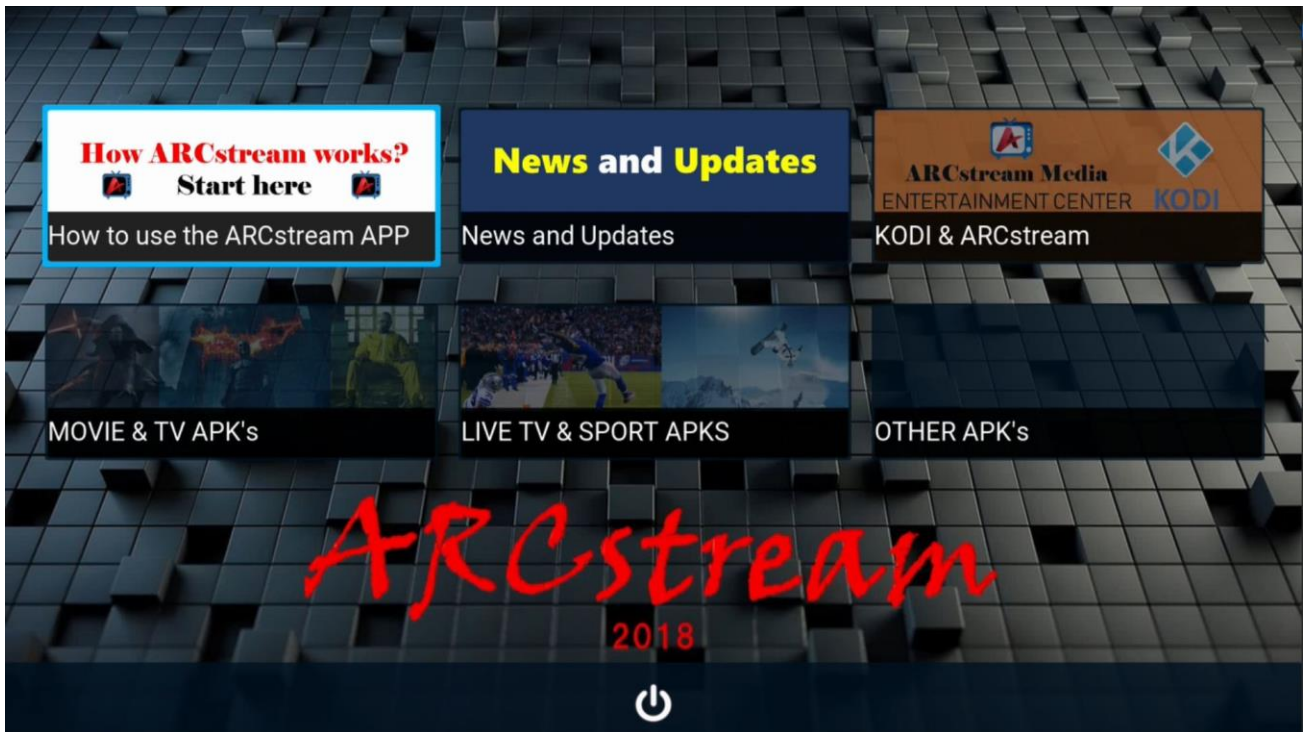

Click on Update Now

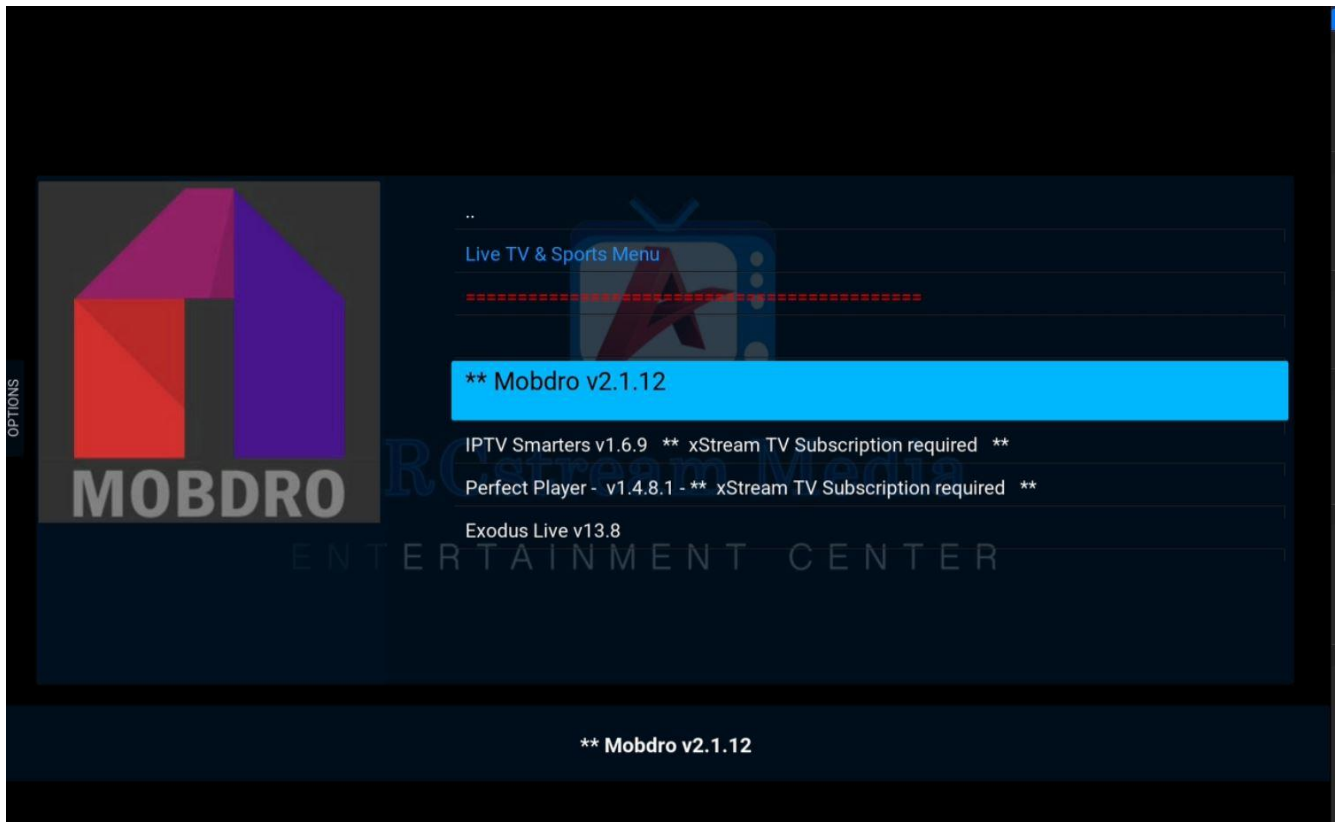

The download will start and only take a few seconds. Click OK, once complete. The app will close down.

Open the ARCstream APP again and you will see the updates and Main screen.

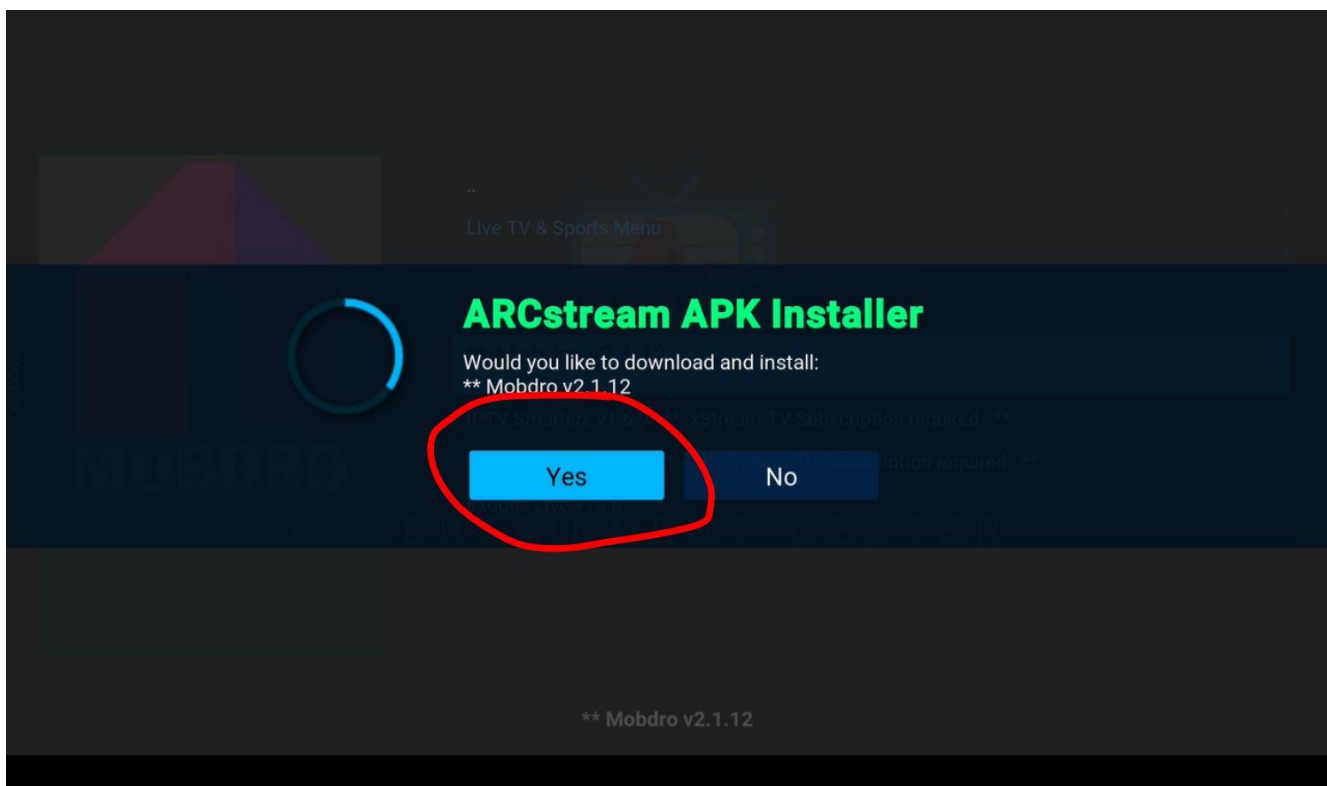

Click on a section and then the file you want.

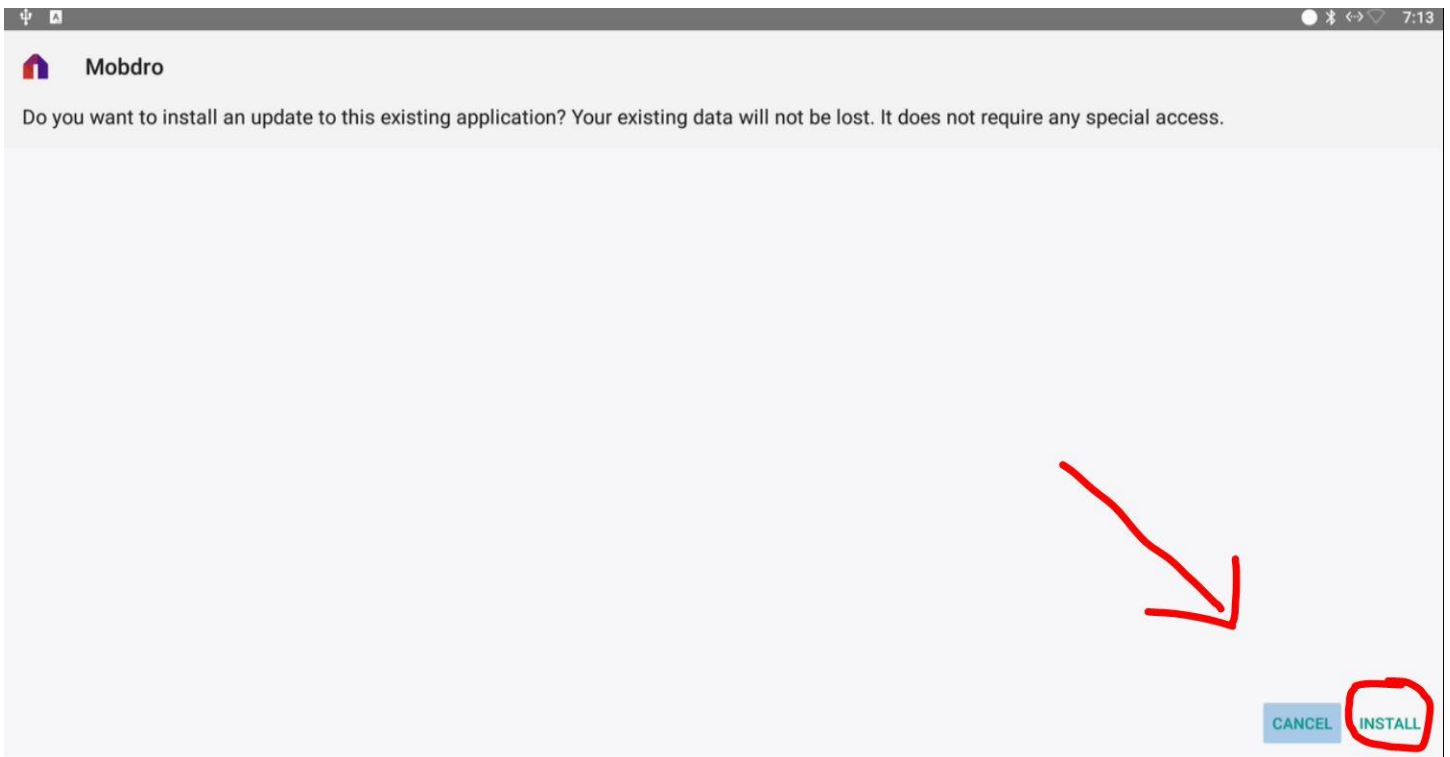

When you click on the file it will ask if you want to install. I am using Mobdro as an example.

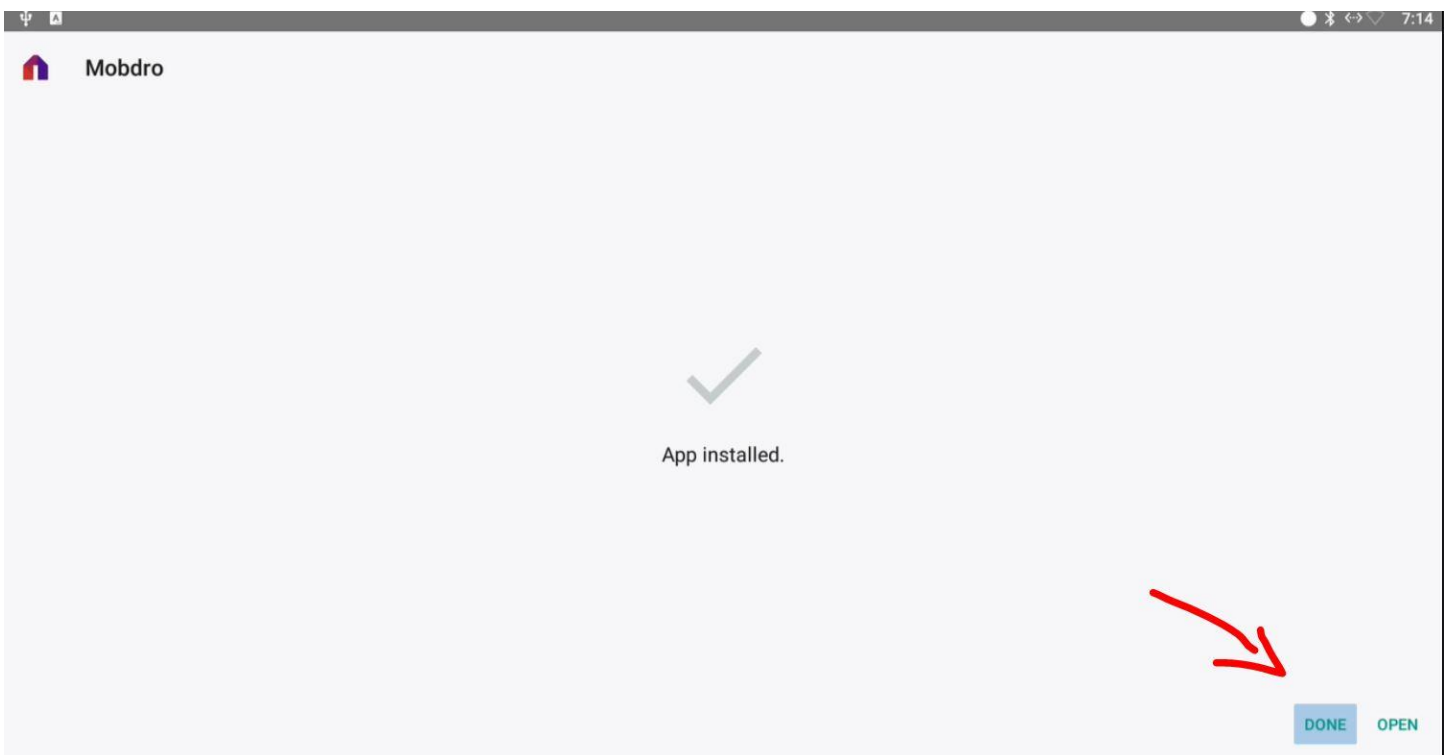

Click Yes

Click on install. (your screen may look different depending on your device)

Click Done

Congratulations, you have installed your NEW APP. Now press the back button until you exit the file explorer. You can find your new app in the app section or application section of your device.

Close the ARCstream app after finishing. This will help to make sure it stays updated.

To close the APP scroll down to the bottom of the app and click either of the two icons shown below to close the APP
