

CODR POKR MATCH

PLAYERS: 4-7

AGE: 11 and above

OBJECTIVE: Win as much currency as possible one pot at a time. A pot is won by having the best hand or by having all other players fold before the showdown.

SETUP

- 1 First, decide on the currency to be used to place bets – skittles, smarties, maltesers, chips, cash or whatever you fancy!

- 2 Then, each player picks a Number Card and the one with the highest value becomes the dealer. An Asterisk Card beats any Number Card between 0-7.
- 3 Next, the player to the left of the dealer sets the Initial Bet Size of the game (i.e. the minimum bet size for every round). For example it could be 2 skittles or maltesers.

- 4 Each player then buys into the game and starts with an amount to place bets. There's no maximum amount with what one could start off with.

- 5 Place the cards face down in the play area as the **Number Card** and **Action Card Draw Piles**.

Now that we're setup, let the CODR POKR MATCH begin!

POINTS TO NOTE

- A CODR POKR MATCH consists of multiple games and depends on the number of players (i.e. one game per player).
- Each game has *three rounds of betting* followed by a *showdown*.
- Each game starts with the first 4 Number Cards being dealt to players in the first round and ends when the pot is won (i.e. the amount bet during a single game).
- Each player in turn takes one of three actions:
 - Fold:** Refrains from placing a bet, contributes nothing to the pot, exits the game by placing their cards down and waits for the next game to commence.
 - Call:** Matches the bet that was made by the previous player.
 - Raise:** Places a higher bet than that made by the previous player. There's no limit on how much the player could raise the previous bet.
- When a round commences, the first player to place a bet, would have to place a bet which is at a minimum equal to the Initial Bet Size.
- When a bet has been raised, subsequent bets made have to either match the new raised amount or be raised further.
- A round ends when all players have had a chance to act (i.e. fold, call or raise) and players who haven't folded and are still in the game have bet the same amount.
- After each game, the role of the dealer moves to the player seated clockwise from the player who dealt the cards in the previous game.
- The game is played clockwise with the player to the left of the dealer starting play.

EACH GAME

Round 1: Deal 4 Number Cards singly face down to each player and place 2 Action Cards in a row face up in the central play area. Then, the first round of betting begins with the first player to the left of the dealer.

Round 2: Deal 4 additional Number Cards singly face down to each player still in the game (i.e. players who haven't folded in the first round) and place 2 additional Action Cards face up adjacent to the other 2 Action Cards in the central play area. Round 2 of betting begins but this time with the first player to the left of the dealer who hasn't folded.

EACH GAME

Round 3: Deal the final 2 Number Cards singly face down to each player still in the game and place one Action Card in the central play area face up adjacent to the other 4 Action Cards. Then, the final round of betting begins with the first player to the left of the dealer who hasn't folded.

Showdown: The players enter into the showdown where they reveal their hand (i.e. how they've solved the 5 Action Cards using the 10 Number Cards in hand to score the highest points), win the game and collect the pot.

To determine the winner of an individual game, the score of each player is calculated by adding the points of the Action Cards solved and the Number Cards used to solve them.

The game may end and the Pot may be won before the showdown if all except one player folds in any of the previous rounds.

WRAP IT UP

- 1 After each individual game, the player with the highest score wins the game and claims the pot. In the event of a tie, split the pot between the winners.
- 2 Then, place all Number Cards and Action Cards in their respective piles, shuffle them and start a new game.
- 3 Keep playing until all players have had a chance to deal the cards.
- 4 At the end of the final game, the player with the most currency wins the CODR POKR MATCH.
