

Certified Drone & Next-Gen Crime Scene Photography Training (Video)

By **Tammy Waitt** -
August 10, 2016

Argus can photograph a large outdoor crime or accident scene utilizing AutoPilot in just minutes and then process all the images into a single orthomosaic photograph with GPS designations and then we can turn that into a 3D Model.

The team at **Argus Rising** is pleased to offer certified drone training for law enforcement, fire, and rescue personnel.

To cater to the needs of first responders across the country, Argus Rising offers several drone training courses.

There are four courses currently available for law enforcement:

Bootcamp
Search & Rescue
Crime Scene Photography with Orthometrics
Active Crime Surveillance

Top Gun CSP (Crime Scene Photography) with Orthometrics

Additionally, there are three courses for specific to fire and rescue:

Bootcamp
Search & Rescue
Active Fire & Accident Surveillance

Top Gun AFAS (Active Fire & Accident Surveillance)

“Aside from the standard uses of drones for first responders Argus has developed a new way of managing Crime Scene Photography (CSP),” said Argus Rising’s founder, Allen Beach.

Allen Beach, Founder, Argus Rising

“Argus can photograph a large outdoor crime or accident scene utilizing AutoPilot in just minutes and then process all the images into a single orthomosaic photograph with GPS designations and then we can turn that into a 3D Model.

“It’s a whole new way of looking at a crime scene allowing both Detectives and Juries to see things they have never seen before. Drones are a natural fit for law enforcement and fire and rescue teams everywhere.”

Beach went on to add, “Drones have become such an effective tool in many areas, even beyond surveillance or locating lost or missing people. Drones are streamlining many processes for companies worldwide and giving us information and data we wouldn’t have been able to collect previously.”
