- ✓ Excellent Fruit Finish
- ✓ Integrated Pest Management
- ✓ Disease Spectrum
- ✓ Residue Management

Mizar Granuflo®

The mid-season alternative

Benefits

- Excellent summer rot control
- Very good black spot protectant
- Help manage captan residues with Mizar without compromising disease control
- Minimal effect on predator mites if used as recommended.

Orthocide 80 WDG®

Quality Captan

Benefits

- Proven black spot performer
- Good summer rot control at higher rate
- Proven IFP fit
- Cost effective
- Superior WDG formulation

Mizar Granuflo®

The mid-season alternative

Label Recommendations:

Mizar Granuflo	Rate / 100 L water
Black Spot	150 g
Glomerella	
Ripe Spot	

For mid season protection apply after 1 or 2 Orthocide applications. **28 day withholding period.**

Mizar Granuflo is a dithiocarbamate fungicide, however it is unique chemistry and does not leave ETU residues as other fungicides of this group can.

Orthocide 80 WDG	Rate / 100 L water
Black Spot	75 - 100 g
Glomerella	125 g
Ripe Spot	125 g

For mid season protection, use in a schedule at 10-14 day intervals, after mid-December. **14 day withholding period.**

Orthocide 80 WDG®

Quality Captan

Getting the BEST out of Mizar Granuflo and Orthocide WDG

- Plan a disease management program that meets residue, cost and IFP objectives – modify according to weather.
- For mid to late season disease management start with Orthocide after third cover then add in an application of Mizar Granuflo in place of an Orthocide for premium summer rot control.
- After Mizar, revert back to Orthocide for Black spot control, and if summer rot conditions persist, use higher rate.
- Breaking up the Orthocide program with a Mizar application will most likely help with residue management of Captan, without compromising disease control.
