STRONG AS A BULL!

ROOF GUTTER SYSTEMS MADE OF ALUMINIUM

THE PREFA COMPLETE SYSTEM

70
YEARS
QUALITY

since 1946

THE APPEARANCE

Roof gutters can shape the appearance of a building in two ways. They either let your façade come perfectly into its own by blending into the overall colour appearance and thus remaining almost invisible. Or they accentuate it deliberately and with great colour intensity, in order to set new accents and emphasise the architecture of the building. Regardless of which version you prefer, the PREFA overall drainage system made of aluminium will provide you with a whole world of colours to choose from.

DIMENSIONS

- 250 mm Round roof gutters, box gutters
- 280 mm Round roof gutters
- 333 mm Round roof gutters, box gutters
- 400 mm Round roof gutters, box gutters
- 500 mm Box gutters
- 700 x 1.0 mm Edge gutter

PERMANENT SPECIAL COATING – PERFECT FINISH

The PREFA gutter is distinguished by its high quality surface finishing in course of the coil coating process. This allows the paint coat to remain formable and resistant even under extreme weather conditions.

GUARANTEED RUST-FREE – LOW-MAINTENANCE

All parts of the PREFA roof gutter system are made of aluminium – a material that cannot rust and that thanks to its innovative surface finish is perfectly suitable for the creative and functional exterior architecture of your building. Even unpleasant maintenance work, such as refinishing and applying another coat of paint, is no issue at all with the aluminium roof gutter system from PREFA.

ALUMINIUM – ENVIRONMENTALLY FRIENDLY

Even for ecological reasons, the PREFA roof gutter systems made from aluminium is the best choice. The material aluminium does not release any harmful heavy metals that can access the waste water system from conventional materials due to gutters and pipes being continuously washed out by rain water. Moreover, aluminium can be recycled 100%!

PREFA SQUARE PIPE

QUADRATIC PRACTICAL, BEAUTIFUL!

THE INNOVATIVE ROOF GUTTER SYSTEM FOR MODERN ARCHITECTURE

The quadratic complete system made of aluminium sets new standards in roof gutter systems. It is ideally suited for use in modern buildings thanks to its simple and elegant design. The PREFA drainage system consists of different matched components, such as: square drain pipes with radii matched to the box gutters or tanks, various 72° pipe elbows, spout intersections or a water collection box with square end.

The innovative aluminium products are convincing thanks to their sturdy design. For instance, the quadratic drain pipe with its 100 mm in lateral length is made of 1.6 mm thick extrusion profiles and with continuously captured retaining clamps.

In addition to the new design, the concealed fastening in particular underlines the minimalist appearance of the facade through the retaining clamp with M10 thread.

The perfectly matched range of accessories supports the simple and quick installation on the building. The PREFA complete system is available in ten standard colours as well as in aluminium blank. In addition, the possibility of a special coating according to RAL or NCS exists for individual colour preferences.

THE UNIQUE PREFA COMPLETE SYSTEM
