TechCrete® 2500 Waterproofing Agent is a bio-based, gel forming, modified silicate solution, that creates a barrier within the concrete against long-term water entry and enhances concrete durability. Using calcium contained within the concrete, a calcium silicate gel is formed. This gel forms within the pores, cracks and capillaries of the concrete, which then forms a barrier against moisture and enviromental contaminants.

TechCrete 2500 Waterproofing Agent is easily applied, penetrating below the surface, with no visible change to the concrete. The results will amaze you and ensure your complete protection for many years to come!

When used with other TechCrete Products, including the ACR Surface Preparation Products, a complete protection system is created. This full system qualifies for a 30-year or 15-year Limited Liability Labor and Material Warranty when installed by a TechCrete Certified Applicator.

**For Use On:**
- Parking Decks & Structures
- Wharf Decks, Marine Structures & Water Tanks
- Airport Runways, Taxiways & Aprons
- Precast Elements & Panels
- Tiled Areas

The following warranties require the use of TechCrete 2500 Waterproofing Agent and are only available when the full system is applied by a TechCrete Certified Applicator:

New Construction: TechCrete DIAMOND
30-Year Limited Liability Material & Labor Warranty.

New & Existing Construction: TechCrete EMERALD
