### **BVAR FIELD SCHOOL ESSENTIALS**

If this is your first time attending a field school, traveling out of your home country, or even your first time in Central America, the following information should be considered and will benefit you in your travels and fieldwork. Please read through the entire document prior to purchasing tools and other items. **Note:** Any brands mentioned below are suggestions and or the most commonly used brand, purchasing these brands are not a requirement.

#### **REQUIRED TOOLS**

- Trowel
- Geological/Archaeological Pick
- Compass
- Measuring iape (metric)
- Line Level
- Plumb bob + gammon reel
- Clipboard
- Notebooks (2)
- Ruler
- Pencils/Pens
- Watch
- Flashlight\*\*
- Pocket Knife\*\*
- Batteries\*\*
- Gloves (gardening gloves/lightweight)\*\*
- Reusable water bottles
- Field Bag/Backpack
- Whisk broom + dust pan

*\*\* Not required, but are suggested*

#### **Marshalltown Pointed Trowel (5-7 inches)**

The **masonry pointed trowel** is the primary tool used by archaeologists. If you plan to pursue a career in the field of archaeology, you should own at least one pointed trowel. Please save yourself some money and avoid buying the square trowels. These are not the efficient trowel for archaeological excavation.

#### **Estwing Geological Rock Pick or Ingalls Co. Archaeological Hand Picks**

**Geological rock picks** are preferred for the type of fieldwork you will be conducting during your time on BVAR. Be sure to get a pick weight that you are comfortable handling. The most common weights range between 14 and 22 ounces.

### Metric measuring tape

**Measuring tape** should be metric (in meters) and should be no shorter than 5 meters. These can be difficult to find in local hardware stores, but can be purchased on Amazon.com.

### Compass

Your **compass** is another important tool you will need for conducting archaeological fieldwork. Compasses can be expensive depending on the specs, The Suunto A-30L runs between \$20 and \$30 and is a perfect compass for beginners.

### Line levels (aluminum or plastic)

**Line Levels** will be used throughout the entire field season and are essential for unit setup, elevation documentation, and other tasks such as mapping. It is always helpful to bring two line levels, as they are the most commonly lost item. You can purchase two-packs on Amazon.

### Plumb bob and gammon reel

A **plumb bob and gammon reel** will be needed throughout the season as well, along with the line level plumb bob and gammon reels allow for precision during unit set up, mapping, and taking elevations (see image to the right),

### Whisk broom and dustpan

Although these items do not sound like essential tools, they very much are. You will be using your dustpan and broom every day, all day as you excavate. While excavating can get dirty, archaeologists strive to keep units clean and tidy so any materials or features can be made visible for documentation, without having to be physically extracted. Additionally, your broom and dustpan will help you pick up more dirt which is more efficient.

### Notebooks

It is suggested that you bring two **notebooks**. It is required by the BVAR project that all students turn in their field notebook as part of their field school completion requirements. Some students like to keep a second notebook for detailed notes for future reference.

### Gloves (gardening/lightweight)

**Gloves** are a personal preference item. Some students like having extra grip in the humid environment and help prevent blisters. Gardening gloves work fine because they are lightweight and breathable yet have some grip.

### Reusable water bottles

**Reusable Water Bottles** are great for the field. Many students buy gallons of water from the local convenience stores to have a reliable supply of water. Reusable water bottles also reduce unnecessary trash. Because hydration is a very important concern, each site will have an emergency water supply.

## **TOILETRIES AND FIRST AID**

- Bug Spray
- Sunscreen
- Soaps\*\*
- Deodorants\*\*
- Baby wipes
- Advil
- Electrolytes
- Laundry Bag (garbage bags)\*\*
- Toothpaste\*\*
- Band-Aids
- Neosporin
- Sting-Ease
- Feminine Products\*\*
- Aloe

\*\*These products can be purchased at any local store in town, many stores carry the same brand name items you can find here in the states. **Bug Spray and Sunscreen** can be purchased in town, however the prices are very inflated compared to the states, and sometimes the stores do run out.

### **Bug Spray**

You **do not** want to use **100% deet products** as they can be harmful to your skin and can cause rashes, sores, and burns. The chemical Deet does cover your pores making it feel hotter, because your body cannot sweat as effectively. It is best to stick with 30-45% deet products, if needed. If you have a strong concern about bugs, I suggest using a bug repellent clothing rinse such as **Permethrin**. Permethrin is a bug repellent that stays embedded in your clothing for up to 10 washes and tends to be very effective.

If you are looking for a more **natural option**, but still want effective bug spray there are many options available and can be found online. Two options we suggest are:

1. Mixing your own essential oils with water in a separately purchased glass/plastic bottle such as the Nature Shield blend below (also comes in a roll-on).
2. The Repel lemon Eucalyptus ready-to-go bottles also work great, but you will need several bottles depending on the length of your stay. Keep in mind that you will be reapplying bug spray several times a day, so if you have **sensitive skin**, you might seriously want to consider the natural option for your own comfort.

### **Sting Ease**

This will help reduce the uncomfortableness of bug bites. **You will be bit** regardless of all preparations so it is best to prepare for being bit rather than preventing being bit. **Cortisone** creams also work very well to this effect, but you may want to consider roll on applicators since your hands will often be dirty in the field.

### **Aloe Vera Gel**

Aloe can be helpful if you burn easy and is known to help reduce bite inflammation. A travel bottle at Target is \$1.

### **Baby Wipes**

This item doesn't seem like a necessity but can be extremely handy. Some of the sites you will be working at may not have reliable running water. Having baby wipes can come in handy during lunchtime as well as other times throughout the day.

### **Electrolytes**

Electrolytes are important to keep handy for yourself or your fellow BVAR-ites. Dehydration can be serious and as previously stated, staying hydrated is very important due to the environment and workload you will be taking on. It is common to see students in the field with one large bottle of water and a smaller bottle with electrolytes that can be sipped on throughout the day.

### **Laundry bags**

Having a place to store dirty laundry is great. If you will be doing laundry in town, you will have to carry it back and forth to the laundromat. Garbage bags can be used but may not be the most durable.

### **MEDICATION**

**If you are prescribed any medication or require any specific medical product, you MUST to bring those with you. You will also be required to disclose all medication to BVAR upon arrival.** There is a pharmacy in town that carries most basic production, but not all of them. There are also doctors and a Hospital in town in case of an emergency, however obtaining medication from the local hospital can be pricey.

The following list makes some suggestions as to what products are commonly brought to Belize:

Cipro	Imodium
Benadryl	Dayquil/Nyquil
Epi-pen (if necessary)	Claritin
Tums	Fiber/Probiotic/Multivitamin Supplements

\*If you take any supplements make sure to bring enough for your stay, as you will not find many options in San Ignacio. Also, keep in mind that our shared meals offer some vegetables and fruit, however you may be getting less fiber in your diet here than you are used to.

### **CLOTHING**

BVAR does not have a dress code. However faculty or staff reserve the right to ask you to kindly change into appropriate field attire if you are not dressed appropriately. Our project works closely with local Belizean communities. It is out of respect for local customs and associated institutions that we ask our students to dress appropriately. Additionally, your field attire and leisurewear should be based on individual comfort.

#### **Clothing to bring**

- Field Pants (hiking/cargo) (2 pairs minimum)
- Field Shoes (hiking boots)
- Old T-shirts
- Tank Tops/T-Shirts
- Field Shorts
- Lightweight Button-Ups (for sun protection)
- Field Hat
- Sunglasses
- Bandana
- Casual Dress Wear
- Sandals
- Socks

\*Keep in mind that you may not get a chance to do laundry more than once a week, so bring enough work clothing to change in to. Make sure to bring high-up/hiking socks for the field (bugs +dirt)

### **Notes on Field Attire**

- Most student prefer to wear **Pants** in the field to prevent additional bug bites and for additional protection. It rains frequently which means it can get muddy which is another reason students prefer pants. REI is a great place to buy field pants but they can be expensive. Other places such as thrift stores, like Goodwill and Savers, have been successful for field clothes in general.
- **Shorts** can be nice for really hot days in the field, but need to be appropriate cut and material (yoga shorts and cutoffs are not acceptable for the field). Cargo or bermuda shorts are a common favorite of students.
- **Field Shoes** are the one item that people worry about the most. Remember you will be wearing these all day so they need to fit and be comfortable. This is an item you should buy in store so they can be properly fitted. Breathable material is commonly preferred due to the heat. Common field shoe brands include: Vasque, Merrell, Lowa, Keen, Asolo ect. Choosing a type of shoe (boot, hiking shoe, athletic shoe. Etc) is up to the individual.
- **Field hats** are nice for extra sun protection as well as for rainy days. Any hat that is comfortable to you is best.

**In Town Attire:** You will want to be as comfortable as possible. It is still hot and sweaty even when you are not in the field. Again, you are representing your institution on a daily basis, so please keep that in mind when you are in town and be respectful.

**Clothing Quality:** Do not bring your finest garb down to Belize, as more than likely you will not even find an opportunity to wear it, and it will just wrinkle in your suitcase all summer. Also on that note, avoid bringing anything you would generally hate to part with down to Belize. Keep it simple, and light.

### **ADDITIONAL ITEMS OF IMPORTANCE**

- Passport
- Cash
- Credit or Debit Card (there is an ATM)\*\*
- ID
- Purse/Day Bag
- Chargers (no converter necessary)

### **YOUR PASSPORT MUST BE CURRENT (WITHIN A YEAR OF EXPIRATION).**

#### **Notes on money**

- The currency exchange in Belize is \$1 USD to \$2 BZD (50 USD = 100 BZD). US dollars are accepted everywhere, but it is best to stick with smaller bills (\$5, \$10, \$20).
- There are ATMs available or cash withdraw (in BZD). Contact your personal bank about international withdrawal fees.
- Some banks will flag your card for fraud when you use it in Belize. You can avoid this by setting up a travel notice with your bank. It's easy and you can tell them exactly where you will be, so if you do lose your card, they should catch any unusual purchases fairly quickly.

#### **Other Optional Items to Bring**

- Laptop
- Water Shoes
- Speaker
- Games
- Dry Bag
- Camera
- Back-Pack Cover
- Travel Sewing Kit + Safety Pins

## **TRANSPORTATION**

- It is \$10 BZD to take the local bus from San Ignacio to Belize City. It can be as cheap as \$2BZD to take the bus to any surrounding towns outside of San Ignacio.
- Taxi's are available in town but you must negotiate the price before getting into the cab. The typical cost of a taxi ride around town is \$5BZD. To travel from San Ignacio to Unitedville (11 Miles) it cost \$25 BZD via taxi.
- Water Taxi's are needed to get to the Cayes, which run out of Belize City. Cost information and a daily schedule can be found on <http://www.belizewatertaxi.com/>

## **FOOD ON THE WEEKENDS**

You will be providing your own food for all of Saturday and most of Sunday (not dinner). There are plenty of options if you are worried about food costs. You can buy food for under \$5 BZD from market vendors on Saturday, smaller restaurants, street food, and the convenience store. There are nicer restaurants available in town that are reasonably priced depending on the dish (\$10-40 BZD)

## **THE LONG WEEKEND**

This is a four-day break usually over the third weekend of each session. During this time you will be able to arrange your own trip or just hang out in town and relax. Note: The project is not responsible for arranging any trips over the long weekend, however those traveling will be required to provide faculty and staff with their destination location and contact info, as your safety is still our primary concern.

**Popular trips:** The islands of San Pedro and Caye Caulker are both popular destinations during the long weekend. Both have beautiful beaches, snorkeling, boat trips, and fun night-life. Placencia is a popular beach on the coast of Belize in the Stann Creek district. Additionally, many students find Flores Island in Lago Petén Itza, Guatemala to be a nice change of pace. Many faculty members and staff can provide advice and other information about these trips, as many of us travel to these destinations regularly.

**Common Archaeological Trips:** There are weekend trips available, independently organized by staff members that are open to students. Usual trips include ATM Cave, Caracol, and Tikal. The approximate prices per trip range between 100-200 BZD including lunch, transportation, and Park entrance fees.
