CONFERENCE ABSTRACTS

Speed dating for research

Elizabeth Bridges, University of Washington, School of Nursing

A challenge with evidence-based practice is the need to find, rapidly read and synthesize evidence. What information is needed to quickly evaluate the quality and findings of a research paper? What information is needed to identify the level of evidence supporting or not supporting a practice? Enter "Speed Dating for Research"—a strategy to introduce the principles of reviewing the literature in an efficient manner. In this session, we will discuss the critical questions that should be asked when reading any research paper and apply this method to quickly synthesize the literature.

Bioethics in patient-centered informatics: from patient portals to mHealth

Diane Korngiebel, University of Washington, School of Medicine

Improving the creation of informatics tools meant for patients' use is critical for supporting patient empowerment in today's age of big, and small, data. Using case examples from patient portals attached to medical records to applications of mHealth technology, Dr. Korngiebel will touch upon the broad range of ethical issues and how co-production frameworks and approaches, such as User-Centered Design and Community-Based Participatory Research, can help address or mitigate them while increasing the relevance of health technologies for patients and health care providers and systems.

Secure communications tools and applications

Caitlin Bagley, Gonzaga University, Foley Center Library

This presentation deals with applications and extensions that can be used when using cellphones and the internet to protect user privacy from a host of different ways.

Project Counter data and its use in libraries

Joel Cummings, Washington State University, Owen Science and Engineering Library

This session provides an overview of Project Counter code of practice and different types of usage reports for journals, books, databases, multimedia, platforms and titles and the information they contain. Discussion of the use of this data in Libraries. It will highlight some of the upcoming changes with the implementation of Code of Practice 5.

Calling BS in an age of misinformation

Jevin West, University of Washington, Information School

The world is awash in BS. Pandering politicians, winking advertisers, startup soothsayers, television "experts", and even some scientists use the news media to promulgate half-truths, misrepresentations and sometimes outright lies. Jevin West and his colleague, Carl Bergstrom, developed a course and set of tools for combatting this misinformation—with a particular emphasis on data, figures, visualizations and statistics.

Plus: RML report, HEAL-WA update, Information School report and more!
