OUR TOP 10 TIPS FOR HEALTHY BLOOD PRESSURE

Keep your weight healthy: just doing this can help bring down high blood pressure

Exercise regularly: aim for an average of around 30 minutes a day. For the exercise to be worthwhile, you need to feel warmer, breathe harder, and your heart needs to beat faster than it normally does

Eat plenty of fruit and/or vegetables every day. Eat vegetables raw or lightly steamed, rather than boiled, to get maximum nutrition. Avoid frying

Add beetroot to your diet: regular consumption of beetroot juice has been found to help bring down your blood pressure

Cut down on salt: don’t forget a lot of salt is hidden in processed foods and is very high in most breads, cereals, soups and sauces. If possible, always read the label

Cut down on fat and sugar: always check the label, and be especially wary of hydrogenated or ‘trans’ fats, as well as sugars ‘hidden’ as other names such as sucrose, dextrose, fructose, and glucose in e.g. fruit juices and fizzy drinks

Stop smoking tobacco! Your arteries clog up even faster if you smoke and this causes many other health problems. Your blood pressure actually rises while you smoke

Reduce your caffeine intake — and remember caffeine is found in some fizzy drinks as well as in coffee and tea

Don’t drink too much alcohol: stick to local daily recommendations — usually less than 2 drinks for men and 1 for women (1 drink = small beer or wine)

Relax: stress contributes to raising blood pressure. So, avoid stress where possible and allow time for relaxation. This can take many forms such as quiet time, socialising, exercising or laughter

A SIMPLE MEASURE TO SAVE LIVES
