

# Business Development Internship

## About us

Bright Circular develops supercritical gasification systems. Our mission is to help our customers save on waste management costs and recover valuable resources such as renewable gas and minerals.

## Who are looking for?

Bright Circular is looking for a motivated student to cover a key vacancy. We invite you to apply if you:

- Are Master student of Chemical Engineering, Process & Energy Technologies or SET with commercial interest or TBM student with affinity for energy technology
- You are excited about sustainable energy and circular economy
- You feel passion for technology development
- You are interested into translating technical performance into economic benefits

## The project

One of the nice features of our technology is that minerals, such as phosphorus, can be recovered from waste to be used back as renewable fertilizers. You will study the technical possibilities for a selective separation of different minerals and look into their commercial valuation. Activities will include:

- Research on available technologies and partners (suppliers)
- Evaluation of efficiencies and costs
- Research on commercialization routes (buyers)
- Setting of Business cases and analysis

To apply please send us your resume and grades transcript to:
