

Internship at the International Energy Agency

Location: Paris, France

Period: Approximately 6 months

The International Energy Agency (IEA) is looking for an intern to assist with its research on energy efficiency policies and measures. This is an excellent opportunity to work with the leading international energy organisation on energy efficiency, which is at the heart of all global energy transitions.

The intern will work in the IEA's Energy Efficiency Division to research and analyse energy efficiency policies, as part of efforts to expand its global energy efficiency policy database, a resource used by policy makers and energy analysts worldwide.

Ideal candidate profile:

- Excellent knowledge of written and spoken English (working knowledge of other languages would be an advantage).
- Current masters or PhD student studying in relevant disciplines such as environmental policy, energy economics, environmental engineering/sciences or similar.
- Knowledge of energy efficiency policies and measures.
- Proven research skills and analytical abilities demonstrated in past work (analytical reports, university assignments and/or published papers).

At the end of the internship, the candidate will gain experience working for an international organisation and join a community of international interns and soon-to-be energy professionals.

Interested candidates should submit a current CV, including a cover letter outlining their interest in the position, to energy.efficiency@iea.org no later than midnight 20 August 2018.
