

Relativity is the leading e-discovery, investigations, and compliance software company with over 100B files under management. We've developed powerful technology to help rethink the cumbersome and arduous task of e-discovery, making it more manageable, efficient, and insightful. With the latest in advanced searching and analytics, machine learning, and visualizations all built in, Relativity's your complete platform for organizing your data, discovering the truth, and acting on it.

**100B** files under management | **170,000** monthly active users

## Relativity Trace for Compliance and Monitoring

Relativity Trace is a compliance monitoring application built on the Relativity platform. You can now leverage the same extensible platform across the compliance and legal function from monitoring to investigations to e-discovery. Leverage Relativity Trace to ingest all forms of communication (email, audio, chat) in near real time and flag the highest risk content to compliance officers for further review.

### Leverage Proven Technology to Make Sense of Unstructured Data

▶ Pull data from any system that powers your business to run a comprehensive review on all of your emails, calls, and chat data in one application. Use the Relativity Rules Engine to flag data automatically as it's ingested.

▶ The Relativity Rules Engine is a new technology that allows a user to define what type of information gets flagged upon ingestion and auto-batched out to a reviewer.

◀ Relativity Trace has analytics and machine learning embedded allowing you to focus on only the most relevant content.

## Audit Trail and Defensibility

Relativity keeps a complete audit history of every user's action within the system. You can see when a document has been alerted, viewed, updated, who did it, and when they did it.

## One Platform for All Communications (email, chat, audio)

Relativity can ingest, alert, and review any type of file including emails, chats, and audio files. We work with multiple speech-to-text vendors who have integrated transcription technology to make your audio files searchable.

## Integrated Proven Analytics

[Relativity Analytics](#) is fully integrated into the compliance monitoring process to minimize the volume of alerts to review and help surface activity that is relevant to you. Relativity Analytics is widely used and has been proven to be defensible in courts around the world.

## Access to the Relativity Ecosystem of Service Providers

Your legal and compliance team will have access to the expertise from the Relativity [Authorized Partner](#) community for diverse, expert services from administrative management, to end user support and training, to quality assurance.

## Shared Investment across Legal and Compliance

Relativity is unique in that it can be the core platform for your legal team's investigation and e-discovery challenges, while also being the core platform for your compliance team's eComms and aComms monitoring challenges. As data move from alert to investigation to e-discovery, you can use one underlying platform.

## Extensible Platform and Network of Technology Partners

Relativity is a platform that allows you to design, build, and integrate applications to extend its functionality. The [Relativity App Hub](#) includes integrations and customized products that were built by Relativity or our community. It allows users to pick and choose the solutions that best suit their unique workflows across different stages of the e-discovery or compliance process and solve data challenges outside e-discovery.
