Program Topic:

Clinical pharmacology captures the science that studies the characteristics, effects, properties, reaction and uses of drugs – especially their therapeutic effect in humans. The field focuses on drug action and incorporates a broad range of subjects including toxicology, safety, pharmacodynamics, pharmacokinetics and drug metabolism. The aim of this presentation is to provide an overview of the discipline of clinical pharmacology and its role as the quarterback in drug development from a scientific and regulatory perspective.

Key topics covered will include:

- Introduction to Clinical Pharmacology
- History of the field of Clinical Pharmacology
- Overview of the development of a therapeutic and the integration of disciplines that comprise clinical pharmacology
- Review of key regulations (US, EU, ICH) that impact clinical pharmacology testing
- What constitutes clinical pharmacology content in a drug label
- Future innovations in the clinical pharmacologists' toolkit

Speaker Biography:

Ron Christopher, PhD, D.A.B.T., FCP, is a full-time consultant and provides professional scientific and regulatory support in clinical pharmacology, toxicology, and DMPK in drug development, as specified by IND, BLA, and NDA requirements. His expertise lies in directing and managing nonclinical/early clinical development activities supporting development of small molecules, protein conjugates, monoclonal antibodies, cellular therapies, infectious disease and gene therapies in the pharmaceutical industry.
