

Let's Go Fly a Kite

Craft for Kids

Spring is a great time of year for many reasons. Better weather, new life in plants and trees, the hope of summer. Sure, there may be a higher level of storms and wind too, but you know what that means, right? Kite flying! Few things are more exciting to a child than taking a kite out on a windy day and watching it soar to the highest height! We're bringing some of that excitement inside with this cute and easy kite craft!

Materials:

12x18 in. blue construction paper

9x12 in. construction paper (2-4 different colors)

White 9x12 in. construction paper (optional)

Scissors

Glue bottle

Crayons

Triangle and cloud templates (included in this packet)

Instructions:

Print out the triangle templates (large and small). If you can, feel free to print/copy the triangles directly onto the colored paper you want to use. Otherwise, cut out the templates and trace the triangles on the 9x12 construction paper in the colors you want to use. Feel free to use all one color, two different colors, or even all different colors! Let your kids get creative!

Next, cut out all four triangles. Glue the pieces onto the 12x18 blue construction paper. Your kids will most likely need helping getting the triangles laid down correctly. Press firmly and allow to dry if necessary.

With a white crayon, draw the tail of your kite onto the bottom. Add some clouds at the top.

With the rest of the crayons, allow your kids to decorate the kite in whatever way they'd like. Take out the cloud template and cut it out. Trace onto white construction paper and cut out if thicker paper is desired for gluing.

Have your kids write their name on the cloud and then glue it down onto the kite. Display proudly! 😊
