Save on Energy program incentives are available to help offset operational improvements. Through Toronto Hydro, you have access to:

- energy specialists
- audits
- training
- financial incentives
- a concierge service to help complete your incentive applications.

Energy conservation measures and financial incentives are all within reach.

Mid-Tier Performance is an initiative introduced by BOMA Toronto to engage and provide support and resources to owners and managers of small-medium sized Commercial Real Estate.

Every dollar Counts

Did you know that energy is the single largest operating expense for commercial office buildings, accounting for 1/3 of a typical budget? Making your operation more energy efficient, means money in your pocket.

Support you can count on

We are here to listen and understand your needs. Energy specialists can assist with your Save on Energy incentive application to help you realize improved building performance, operational cost savings and a shift to a more sustainable and profitable future.

Education & empowerment are key

By building a relationship with BOMA Toronto, you have access to many education and information seminars and webinars along with several networking events. All of which provide great opportunities to connect and learn from industry peers.

Embark on energy efficient projects and reduce your operating costs. It's easier than you think!
