

Revolutionary Reservoir

With a 200 mL capacity and less than 1 mL of dead volume, the SBS-format VBLOK gets the job done.

What's in the Box

- 25 VLOK200s per case

Optional Add-Ons:

Waste Station

Refillable Reservoir System

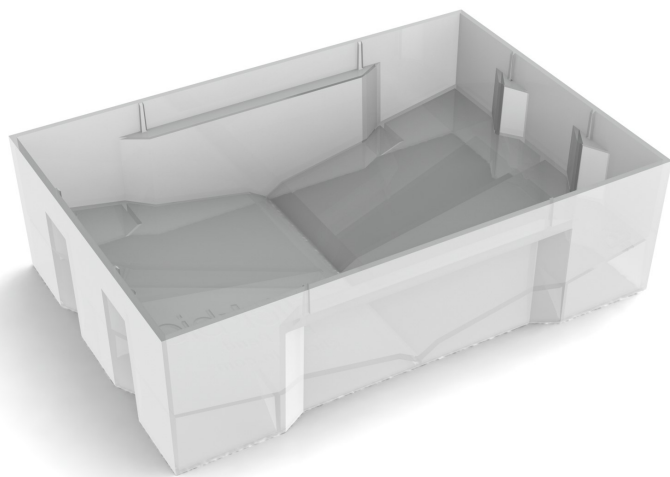

Heater Adapter

Pro Tip

- Aspirate with individual channels or a multichannel head
- Place a plate upside down on the VBLOK and centrifuge and avoid using tips to remove reagents or to pool samples

In a world of ever-more expensive reagents and chemistries, here's a lab automation breakthrough that will save you time, money, and effort: The Clickbio VBLOK200 reagent reservoir and collection plate is the only reservoir on the market that doubles as a centrifuge-compatible collection plate.

The VBLOK200 is a 200mL capacity V-bottomed reservoir with a dead volume less than 1 mL. It can be used as a standard reservoir or as a collection plate that fits almost any microplate for centrifuging.

The VBLOK is also an integral piece of labware for the VBLOK Waste Station and the Refillable Reservoir.
