

SVPro HerbDry 2000 series

Maximise flavour, maximise quality

For the best quality dried herbs, and efficient processing to maximise returns, we've engineered the *SVPro HerbDry 2000 series*. Gently drying in dehumidified air, intensity volatile oils without the burnt and rancid overtones.

Clean, green and energy efficient, you'll achieve excellent results every time.

Gentle and efficient air drying

Critical success factors

Using quality produce, the three factors critical to successful herb drying are quality, temperature, and air flow. The *SVPro HerbDry 2000 series* ensure optimum drying temperatures in a low humidity, high air-flow environment designed for processing efficiency.

Our solutions can be engineered for single crops, to perfect processing specific to every crop.

Scaled to size; extend as needed

SVPro HerbDry drying systems are modular, and can be scaled to suit the size of your operation whether a small processor or a commercial operator.

And our *SVPro HerbDry* solutions can be integrated into existing drying processes easily and effectively.

Environmentally friendly

The *SVPro HerbDry* series offer thermostatically and humidity controlled air drying. Systems can be self powered, working all the time the sun is shining. Each solution consists of an air collector, a dehumidifier, and a distribution fan. Solar voltaic panels can power the fans, or grid-connect for faster processing and greater control.
