

Pringles Can

Who knows a definition for circumference?

The circumference of this Pringles can is the distance **around** the can.

Estimate how the circumference of the can compares to the height of the can.

When you are looking at a circle, like the lid of the Pringles can, how could you measure the circle's diameter?

How could you measure the circle's radius?

Does anybody know why we represent the number Pi with a symbol π instead of a number?
