Overview

What is BECKSANG?
BECKSANG is a unified cryptocurrency platform that provides cloud mining, mining pools, mining tools, and trading market to the client and enables the new decentralized cryptocurrency platform. The cloud mining, mining pool and mining tool provided by BECKSANG will help the clients reduce time and cost taken for the transaction. Transactions may always happen during the mining, trading, funding processes, and even when simply sending money to someone else. BECKSANG’s unified platform will simplify the procedures by reducing the number of transactions through the system of a single universal wallet for each platform. BECKSANG expects the reduced transaction process will become an attraction for the cryptocurrency miners, because the simplified procedure will allow them to save money. As a number of miners are expected to be induced by the low fee, BECKSANG will create profit through the advertisement despite the fact that the fee is 0%. Investors can exchange hashrate with ARI token through BECKSANG cloud mining. Taking BECKSANG’s mining and trading market as the groundwork, we will make a new cryptocurrency for the online trading. In conclusion, early investors will earn hashrates through BECKSANG cloud mining, the miners will mine at a low fee with BECKSANG mining platform, and advertisers will get high-quality cryptocurrency focused advertisements, which will enable the implementation of a new cryptocurrency that works as the national currency.

Mining (NOAH)

Operation Method
As a strategy to invite miners, the BECKSANG mining pool will offer a permanent 0% fee for miners. The cloud mining system will allow mining within this pool, which will lead to a huge-scale mining pool. The mining tool will charge a 0.5% dev fee, which is 3 times less compared to the conventional fee of other services. The BECKSANG cloud mining will be offering a very reasonable price to the customers. Customers will add hashrates through the purchase of virtual GPUs in
which each GPU will have its own hashrate for mining. The price of each GPU will be calculated with the actual GPUs and the relevant tables of price comparison will be open to the public. The BECKSANG cloud mining will accept refunds and the refund payments will be made through the time-base calculations. Customers can also monitor their hashrates through the BECKSANG mining pool. Successful advertisements are expected for those launching ICOs and others because miners usually monitor their hashrates to make sure that no problems are brought about. Also, the miners are actual potential investors who use cryptocurrency for investment. As mentioned in the overview, the payout will be managed in a very swift manner due to a huge procedural decrease in terms of transaction through BECKSANG.

**Pursuit**

The miners and advertisers will get advantages with the BECKSANG mining service, including the instant payout, low fee, and advertisement efficiency. BECKSANG mining will be connected with the BECKSANG trading market. Therefore, if a miner wants to exchange the cryptocurrency, the trade will be done almost instantly. Reduced fees will be a huge advantage to miners, because it becomes even more profitable as the scale of mining increases. Mining tools will be distributed from the BECKSANG website so that miners won’t need to search for mining tools for each cryptocurrency. Investors will get their advantages from cloud mining hashrates. BECKSANG protects investors who exchange ARI token into hashrates, which is a very favorable deal as an investment reward.

**Strategy**

The BECKSANG mining pool offers lifetime updates. It is observed that the mining pools of our competitors are hardly updated in terms of UI, and they are not so open to hearing inconveniences from miners. But BECKSANG offers a convenient mining pool website with an effective and dynamic graphic UI for miners. BECKSANG will also run a Q&A board to hear about any complaints and inconveniences from the users. The existing cloud mining services do not
provide a large variety of choices for a specific cryptocurrency. However, BECKSANG cloud mining service allows the customers to choose what to mine just as if there is a real mining rig. Mining tools are provided for the specific cryptocurrency so that the miners must collect a specific mining tool for each cryptocurrency. The BECKSANG mining tool will be controlled by each account holder of the BECKSANG mining pool. Therefore, it is easy for the miners to choose what they want to mine. In addition, the BECKSANG mining pool and the BECKSANG mining tool will also be available with various cryptocurrencies.

**Trading Market** (RAGNAROK)

**Preparation**

Cryptocurrency trading markets currently exist all over the world. The existing markets have different prices of cryptocurrency, and only a few national currencies are exchangeable with cryptocurrency. The aim of BECKSANG cryptocurrency trading market is to exchange cryptocurrency with various national currencies, as the groundwork for the next project. The BECKSANG cryptocurrency trading market will serve various algorithms to create graphs. There are only a few trading markets that have a variety of graphing algorithms. Graphs are the only reliable partner in the world of currency trading, but many trading markets do not offer this important service. Since the BECKSANG cryptocurrency trading market will distribute worldwide, there will be a 0% fee for cryptocurrency trading. BECKSANG will also be maintaining the market through the advertisements. The advertisements made in the BECKSANG cryptocurrency trading market will aim to be the big-scale advertisements.

**Future**

The BECKSANG cryptocurrency trading market has various targets. The cryptocurrency trades will be made all around the world, and the advertisement through BECKSANG will be global. The BECKSANG
cryptocurrency trading market also offers 0% fee for the traders for cryptocurrency trading, which is expected to attract many traders from all over the world. Trading, buying, or selling the cryptocurrency in the BECKSANG cryptocurrency trading market will assist the traders when negotiating with the local banks to convert the cryptocurrency into the actual national currencies.

**Differentiation**

The differentiation of BECKSANG cryptocurrency trading market focuses on the stability. Some trade markets cannot handle the large traffic when the transactions flood within a certain period of time. BECKSANG engineers are very experienced in handling a large amount of traffics.

**New Decentralized Cryptocurrency**

(CREATION)

**Next generation**

BECKSANG is planning to launch a new decentralized cryptocurrency that can be used for the real-world online shopping. There is no cryptocurrency that truly exists as money, but only as funds. Only Bitcoin is barely in use as real-life money in specific areas. BECKSANG is looking forward to negotiating with big online shopping markets to use its cryptocurrency as a payment gateway. When a customer makes a payment in BECKSANG cryptocurrency at an online market to buy goods, BECKSANG will pay the bill through the BECKSANG cryptocurrency trading market. The BECKSANG cryptocurrency will be mineable and tradable in the BECKSANG cryptocurrency trade market. All three projects will lead to one giant network and will be the biggest platform in each field.

**Stabilization**

The BECKSANG cryptocurrency takes the massive simultaneous transactions and data into consideration. Bitcoin and Ethereum have big issues today and are yet unable to solve the problem completely. The BECKSANG
cryptocurrency will address those problems, and every other issue that has to be taken under attention. The biggest advantage is that the BECKSANG cryptocurrency trading market will carry out as a bank to make this happen. All three platforms will bring a synergistic effect to become the biggest platform in the industry.

Challenge

Researches will be conducted consistently after launching the cryptocurrency. The conventional cryptocurrency makers have been indifferent in terms of managing inconvenience claims after sales. BECKSANG will open a forum dedicated to the relevant cryptocurrency to promote lively discussions about the BECKSANG cryptocurrency and other platforms.

Closing

Currencies as a means of business have evolved along with human technology. People always aim for easiness and comfort. Cash is easy to carry, credit cards are much easier to carry, and nowadays payments are made through mobile devices. Digital is and will be the next evolution of currency. BECKSANG will lead this future.
