Abstract

This article is written on purpose to discuss about the power of knowledge for evolution of human. The purpose of this article is to identify the importance of knowledge in human life, to find out the value of knowledge for human development and to investigate the capabilities of knowledge as a source for human evolutionary phase. Besides, these articles are discussed about developing a knowledgeable community, union of culture, religion and the diversity of labour force.

Keywords: knowledge, society, evolution, community, mankind

INTRODUCTION

Nowadays, knowledge is not only for teenagers or specific people but it is for all people in this world and it now will become the something that all people must have it and possess it in themselves. Therefore, knowledge is very important for all people not just in some quarters because it will give us more confidence to deal with people in a variety of situations. People has realized and know not only children need to have knowledge for survive in life. But it is the responsibility that all people must to pay for themselves. Besides that, becoming such the knowledgeable person will show that the person has passed for his evolution phase.

Today, there are so many scholars have produced many disciplines which are discussing about the human civilization that must have relation with the level of knowledge that have by certain of society. According to Lazlo (2002), the rich of a country is not only accounted on the ability of their manpower to get and covert raw materials, but to the level of intellectual and the abilities of the people of that particular country themselves. This is mean knowledge is very important part among all the mostly crucial things that every citizen of a particular group of people must have and attained in which it shows and states the level of intellectual of the citizens. Besides, Lazlo (2002) defined that the level of civilization of a society is depended on the level of intellectual owned by the society.

Moreover, Knowledge can also be meant as having power or ability to affect of human evolution. This is because knowledge is not just based on theoretical aspect, but knowledge can also be used by practicing and using it for our life every day. From knowledge that we have, we can use it for improve our life. For example, when we have knowledge, there are more things we can do like expanding the technologies that we have which can help us to ease the entire process of our daily life. That is because when we have knowledge, we can do everything and yet, we can change everything

using the knowledge that we have in ourselves. Knowledge is the power that can change people and bring them to the civilization and modernization, which leads to a better evolutionary phase of the mankind.

ISSUES AND PROBLEMS STATEMENT

- Lack of knowledge in living within a society
- Culture is fading due to inadequate religious knowledge
- Misunderstanding among people due to a diversified community
- Lack of knowledge will make a problem when interaction with others

RESEARCH OBJECTIVES

- To identified the importance of knowledge in human life.
- To find out the value of knowledge for human development.
- To investigate the capabilities of knowledge as a source for human evolutionary phase.
- To improve more skills of using knowledge.

RESEARCH QUESTIONS

- Is knowledge importance to human?
- How knowledge will bring human to evolution?
- What kind of evolution can knowledge bring to people?
- Is knowledge can improve the cooperation among society?

LITERATURE REVIEW AND PROPOSED FRAMEWORK

There are many ways that knowledge can help us in evolving ourselves for a better future. So, the first method available on how knowledge leads to the changes in human is by developing a knowledgeable community. The knowledge society, as on the definition is a group of people that live together in a particular place, and they have knowledge and information with them which makes them a mastermind of their own life. Besides, this knowledge society needs far-thinking minds to help themselves in becoming ever more civilized and building their own civilized lifestyle. According to Sheikh Mohammed Rashid al-Maktoum (2007), he mentioned that an attempt to import ready-made solutions not indigenous to this part of the world and enforce them is not the correct option for our region. So this cited phrase has proved that when it comes to problems, decision making and knowledge is important to prevent chaos and unwanted result from exactly happened (Veng, 2012).

The element that is included under the problem-oriented learning processes is the union or, so-called as the union of culture and religion. For the definition of culture, it can defined as something that have been done since one's ancestor and the next

generation will always keep preserving and continuing the cultures prepared by their ancestors for them (Schiavone,2014). In every race and ethnicity existed around the globe, there are many cultures derived from each of the ethnicity. Religions are also generally defined as any faith and believe that is applied by a person in his life. This is meant that religion is a belief that people put to faith in their life which they are depending on. There are lots of numbers of religions existed in the world in which there are Islam, Christian, Buddhist, Atheist and more. Every religion in this world have their own beliefs, rules, laws and also regulations. Even time is something that is obsolete, which means it changes, and rapidly change, but the culture and tradition that have been hold by the generations to another generations will never fade away. That is because if we have knowledge, we will knowledge how to make our culture be perpendicular as the rules and regulations that have been set up by the knowledge of religion teachings.

Furthermore, the other element that is giving and contributing in the process of developing, manufacturing and improving a society to become a knowledgeable society that are able to use the dynamism and power of knowledge for a better evolution of mankind is in terms of diversity in the labour force (Schiuma, 2012). The generally idea that can be used to define the diversified workforce is the situation whereby the society is trying to do the something new or something that different like others and an extraordinary (Wooltorton, 2015). In the terms of diversified workforce, it also means as variety types of human resources that joined together in completing every tasks and things that they have to endure. The variety of diversified human resource can be connected with the knowledge that can change this world with the many languages and cultures. This is due to the existence of many countries which derive many languages and sub-languages around the world (Worton et al., 2015). For example, at the Malaysia, Thailand, Korea, Australia, Portugal, and so on, all of these countries have their own languages that they use to communicate with each other.

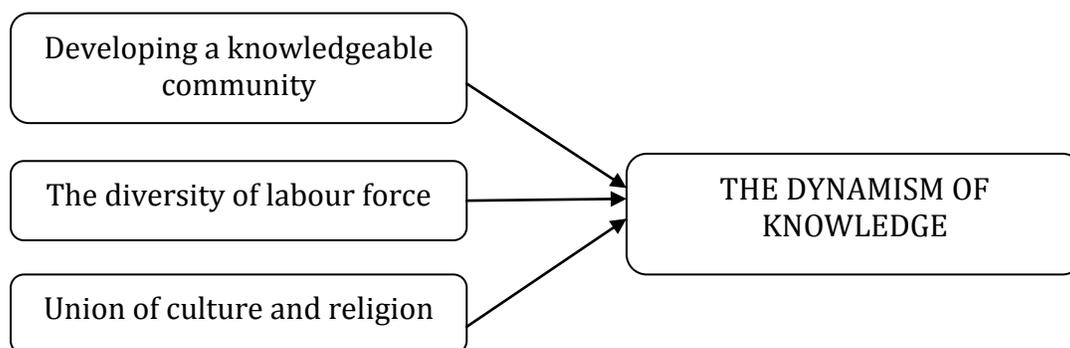

Figure1. Proposed Framework of the study

CONCLUSION

The most important thing for every human being is not the concrete things that they have possess, but it is the knowledge that plays and gives the most crucial effects on everyone's life. People might say that they can survive without being a wealthy, or having less money, but, they cannot say that they can live without knowledge. Even for fundraising it, they need knowledge to get money so that they can live. For example, if we want to work, we need to learn and get certificate that certified we have knowledge and capabilities in a particular working field. Only then, we can get money to continue our life. But without knowledge, we cannot go anywhere. We will sit still at the same place without going to any evolutionary phase of mankind for a better future. This evolution phase does not always refer to the situation of being more advanced than developing. But, it is also meant to be someone with better knowledge and practice of religion practice. That is also referring to the good evolution phase of mankind.
