

Republic of Korea: Reported and estimated abortions, 1970-2015

22 July 2016

Wm. Robert Johnston

Abstract: This document reviews available abortion data and estimates for the Republic of Korea for 1961-2015, related demographic data for 1953-2015, and other information related to abortion policy.

The Republic of Korea (South Korea) enacted population control policies in the 1960s, and while abortion was authorized for restrictive reasons in 1973, it became common by the late 1970s. This high incidence is related to high frequency of unwanted children, evidenced also in large numbers of Korean children adopted out-of-country. A campaign by physicians was important in the introduction of restrictions on abortion in the 1990s and 2000s, particularly addressing sex-selective abortions, which have contributed to male-female population imbalance. Below is a brief summary of changes to abortion policy as well as adoption policy.

- 1953: criminal code banned abortion;
- 1961: population control policy adopted;
- 1962: national family planning program implemented;
- 1966: effort to legalize abortion was rejected;
- 1970: effort to legalize abortion was rejected;
- 1973: abortion law amended to permit exceptions for cases of rape, incest, severe genetic disorders, and health of mother before 24 weeks;
- 1987: law passed addressing sex-selective abortions by limiting fetal testing, prohibiting doctors from revealing fetal gender to mothers;
- 1989: limitations on international adoptions introduced;
- Jan. 1990: medical licenses of 8 physicians suspended for performing sex-determinations on fetuses;
- 1990: presidential decree to address sex-selective abortions;
- Feb. 1995: Korean Medical Association initiated campaign against fetal sex determination;
- 2005: implementation of policies to promote childbirth;
- July 2008: court ruled that the ban on revealing fetal gender is unconstitutional;

- July 2009: some illnesses removed from list of cases of permissible abortion;
- Oct. 2009: GYNOB coalition of medical professionals formed opposing abortion;
- Aug. 2012: new adoption law, restricting international adoptions;
- Oct. 2012: court upholds 1953 abortion law restricting abortion to cases of rape, incest, severe genetic disorders, and health of mother before 24 weeks.

The tables to follow summarize reported, estimated, and derived abortion data and other related demographic data. Available abortion data for the Republic of Korea are mostly estimates based on government or other surveys. These surveys have large sample sizes compared to surveys underlying most published abortion estimates for developing countries, and we assess the Korean estimates to be of higher credibility. Table 1 summarizes the sampling and sample sizes for estimates reported here by source code. For years between years with reported abortion data, we use linear interpolation, and do so also between reported estimates irrespective of differences in methodology for the reported estimates. Estimated abortions for 2011-2015 are based on an annual decrease of 10%, consistent with the median annual decrease for the preceding 5 years. Live birth figures for 1961 to 1969 are derived from reported rates and are incomplete. Estimates of possible excess female abortions (sex-selective abortions) are based on an assumed birth sex ratio of 1.08 in the absence of sex-selective identified abortions. Data with codes for sources are provided in Tables 2-4; “der” indicates derived figures, and estimates by the compiler are highlighted in yellow.

Table 1. Bases for published abortion estimates, Republic of Korea.

A12a	estimates based on survey of abortion providers (25 hospitals, 176 private clinics)
B06a, J10h	estimates based on National Fertility and Family Health Surveys by the Korea Institute for Health and Social Affairs
H79a	estimates based on survey of abortion providers (41 hospitals, 685 private clinics)
H99b	estimates based on survey (ever-married women ages 20-44)
K11a, Y11a	estimates from Ministry of Health and Welfare survey (4000 women)
L89a	estimates based on 1988 National Fertility and Family Health Survey by the Korea Institute for Health and Social Affairs
S07a	estimates based on survey (married women)
T79a	estimates based on survey (6300 ever-married women)

Totals for several statistics over the available data periods specified are:

- Live births, 1961-2010: 36,655,255
- International adoptions (ROK sending), 1961-2010: 161,814
- Abortions, 1961-2015: 18,367,000
- Sex-selective abortions (minimum estimate), 1984-2004: 195,500

Figure 1 shows abortion and live birth numbers for 1961-2015.

Figure 1. Republic of Korea live births and abortions, 1961-2015.
