

## Wall Shelf assembly instructions.

Please read all instructions prior to gluing any pieces together.

This kit was cut with a laser. It has some leftover black particles on it. Please clean carefully with a tack cloth (or a very lightly damp paper towel) before handling or assembling. Isopropyl Alcohol can also be used to remove smoke. One side of the wood will have more smoke marks than the other side. Consider this prior to gluing, so you have a plan about what part of the model you want to show most prominently.

- Insert tabs of Shelf into the holes in Back.
- Repeat for all Shelves
- Position Sides to form a box with shelves (should meet the Back on top and bottom for height)
- Glue Sides in place
- Glue ornament below bottom shelf, curves facing down
- Glue Shelves if desired

### Notes:

Consider painting or staining prior to assembly / gluing to allow complete coverage.  
Double check leg placement prior to gluing.
