

Navae Vitae: Active Life

- Ambitiously successful project from a technological point of view.
- Appreciated how the systems are celebrated in the facade and not buried away.
- Clear section shows how the different systems work relative to the environment.

Restoring Light Memorial

- The way that the façade glows at night makes you think about what the project is celebrating.
- Accessible from the street and how it integrates with the life of the city.
- Expands beyond the site to the neighborhood and provides much needed shade to the area.

Meditation Center

- Powerful and bold move with a sense of abstraction.
- Natural light coming through the screen would make for an interesting interior space.
- Good procession from entry into the main spaces.

Health Park

- Very clear and well executed building diagram.
- Detailed and thoughtful craftsmanship.
- Successful use of familiar form that cantilevers reaching out into the landscape
- The transparency of the façade lets you see how the connecting spaces work.

Lakeland Regional Health Carol Jenkins Pavilion

- Tapering of the façade engages the landscape and grounds the building
- Public space and circulation have a sense of articulation and modulation that make the interior space wonderful for this type of building typology.
- Appreciated the way natural and artificial light were integrated into the public spaces.
- Attention to even small details such as the terrazzo flooring wrapping up into the bench by the stair or the ACT ceiling integrating lighting and mechanical systems in a successful manner.
- Very well carried out from the big moves to the fine details.

Orlando Health Freestanding Emergency Dep

- Craft and composition of the exterior resonated with jury.
- Organization is clearly reflected in the façade.
- Organization is simple in plan but rich with the simple moves along the public space.
- Drop off canopy makes a striking front door to the building.

Signature Flight Support Headquarters

- Clearly defined concept and design drivers were carried out throughout the entire project.
- Had a sense of openness that visually and spatially allowed the interior to feel as part of the landscape.
- Craftsmanship and composition of the interior space was nicely executed.
- Good variety of spaces with cubicles, offices and various collaboration areas throughout.

Baptist MD Anderson Cancer Center

- Appreciate the layering of cladding materials to emphasize the different massing.
- Materiality of the building transforms it from an impersonal project typology into a personal and accessible one, feeling more like a home than an institution.
- Coloration of façade and screening help break down the scale of the building.
- Geometry of the building allowed for all sides to be responsive to the environment.

Private Residence: House in the Woods

- Appreciated how the building was sited and how it engaged the landscape.
- Folds in the plan create successful interior and exterior spaces
- Roof forms and the use of natural light emphasize connection to the landscape from the interior.
- Depth of rooms in plan allow for good access to natural light and ventilation.
