Elliott's New EPIC Track Solution Provides Any Organization the Ability to Build Custom Tracking Scenarios for Everyday Use

Organizations of all types can enhance their current identity program by adding Elliott's EPIC Track Solution to track people, places and things for specific events or routine tracking. EPIC Track is a secure and effective accountability solution that allows authorized users to build customized tracking scenarios and generate reports on all activity by simply using a handheld device and access to a cloud server.

St. Louis, MO September 14, 2012 - Elliott Data Systems, Inc., an expert in the development and integration of the Mobile Solutions™ line of identification, accountability, and tracking solutions, released their new EPIC Track solution today. EPIC Track is a universal tracking solution that simply consists of an EPIC Track handheld and EPIC Track Cloud Server used to capture and manage data on people, places and things. The unique features in EPIC Track allow users to start small and scale their system up easily. EPIC Track Cloud Server provides the backbone of the solution, allowing for easy deployments with no special server infrastructure required for site and reporting accessible from virtually anywhere.

This is an off the shelf solution that delivers preloaded EPIC Track Handhelds, that work both on- and off-line, and access to the EPIC Track Cloud Server via internet connectivity. With a flexible and user friendly interface, authorized personnel can choose from a variety of options within the administrator module to configure tracking scenarios and begin tracking within minutes. These administrative options also allow users to generate specific reports during or after an event. EPIC Track Handhelds have the ability to support virtually all formats including 1D & 2D barcodes, QR tags, and MiFare, Moca and DesFire cards. Data used to build lists in EPIC Track Server can come from existing ID Systems, CSV files, BadgePass, or other ODBC sources. An automated data acquisition interface provides a powerful foundation for building "lists" of people, places, or things to be tracked.

About Elliott Data Systems, Inc.

Elliott Data Systems, Inc. is a Mobile Solutions™ systems developer and integrator with expertise in deployment of Mobile Security, Positive ID, Accountability and Tracking Solutions.
