Elliott's New Mobile ID 1.0 Solution Provides a Very Flexible Stepping Stone for Organizations Wanting to Implement Mobile Solutions™

Elliott's new Mobile ID 1.0 solution provides organizations an affordable way to enroll personnel and issue secure IDs using an affordable entry level ID solution that can transform into a complete accountability system with the seamless integration of other Mobile Solutions™ accountability software and hardware.

St. Louis, MO January 9, 2012 - Elliott Data Systems, Inc., an expert in the development and integration of the Mobile Solutions™ line of identification and accountability solutions, released their Mobile ID 1.0 software solution today. Mobile ID 1.0 is a basic enrollment and ID issuance solution specifically designed as a building block to support Elliott's more complete accountability Mobile Solutions™ such as the Emergency Event Manager, Construction Site Manager, Asset Manager and Accountability Manager Solutions. Mobile ID 1.0 allows organizations to begin issuing IDs to personnel and enrolling them into the system with the ability to later expand their system into a more comprehensive accountability solution.

With Mobile ID 1.0, users are able to capture personnel data including contact information, full color photo, certifications, specialties, security level, etc. Hardware components are integrated with the Mobile ID 1.0 software enabling users to instantly print a secure, quality ID badge on-site. Skill sets, certifications and obtainable assets purchased by the individual can be entered into the system and connected to personnel. Collected data can also be shared by multiple departments/divisions with authorization and the system's reporting feature allows users to easily run reports on the data collected by individual departments/divisions or data shared among any other authorized departments/divisions. The flexibility of Mobile Solutions gives organizations the ability to allow their system to evolve as their needs grow instead of immediately investing in an all encompassing solution that may not be fully utilized or fit into their budget. The adaptability of this solution allows organizations to begin using a simple identification system to issue secure IDs and easily expand their capabilities to include personnel tracking and accountability at a later date.

Mobile ID 1.0 allows approved personnel to choose from a number of card designs and print high quality ID badges that adhere to the FIPS guidelines issued by the government to ensure a secure credential. The basic system includes Mobile ID 1.0 software, ID Card Printer, camera, SmartReg scanner, ID card supplies and accessories. Mobile ID 1.0 can be installed on a new or existing laptop or computer, however this ID system can also be integrated with an Elliott Mobile Command Case which provides an integrated, mobile compact ID system that can easily be transported to any location and operated with the press of a button. Mobile ID 1.0 can also be enhanced with the integration of Elliott's IDPix 1000 Professional which provides one click photo capture of professional, high quality images. Other advanced features include the ability to create custom card designs.

Elliott delivers Mobile Solutions™ to organizations nationwide both directly and through a number of business partners located throughout the United States. Elliott and their Certified Solution Providers are trained and certified to deliver professional services including consultations, user training and technical support for Elliott Mobile Solutions™ such as the Mobile ID 1.0 Solution.
