Elliott Releases Casino Track, a New Solution that Increases Security by Instantly Identifying a Barred Player Attempting to Enter a Gambling Area.

Casinos and other gambling institutions can now identify barred players as soon as they enter their facility using Elliott's new Casino Track Identification & Verification Solution. With a simple scan of a player's ID, personnel are able to identify a barred player within seconds.

St. Louis, MO June 1, 2011 - Elliott Data Systems, Inc., an expert in the development and integration of the Mobile Solutions™ line of identification and accountability solutions, released their new Casino Track solution today. The primary purpose of the Casino Track solution is to provide gambling institutions the ability to alert casino personnel of barred players attempting to gain access to gambling areas. Casino Track is a simple way for casinos and other gambling institutions to save money by avoiding large fines issued by the state Gaming Commission and increase security by quickly gathering player information and verifying their status as a barred player.

Casino Track is a software solution that uses SmartReg to scan a patron's driver's license or state issued ID to instantly gather information, check the data against self exclusion lists such as the state gaming board self-exclusion list, local permanent or temporary barred lists, and verifies on screen whether or not the person is a barred player. With the swipe of an ID, casino personnel are able to gather player data, identify their age and alert them of barred patrons trying to enter the facility within seconds. Casino personnel are also able to perform manual searches and view a complete list of barred players.

Casino Track can verify barred player information listed on multiple databases available. A Casino may want to verify a player against a local list they maintain or may include a state-wide self-exclusion list maintained by their state Gaming Commission. Many states have a self-exclusion program that allows problem or pathological gamblers to voluntarily place themselves on a barred list. This state program is an external tool used by problem gamblers to prevent them from entering a casino and aiding their addiction. Failure by the casinos to uphold the regulations of this state program may result in hefty fines or penalties issued by the state Gaming Board.

The Casino Track Solution is now available to purchase through Elliott Data Systems or a number of business partners located throughout the United States. Elliott and their Certified Solution Partners are trained and certified to provide professional services including consultations, user training and technical support for Elliott Mobile Solutions such as Casino Track. Elliott is a member of the Identification Systems Group (ISG), a nationwide network of local experts who provide identification solutions and technical service.
