Dr. Chatterjee,

Thank you for sending this along and I am sorry that it took me so long to get a response back to you.

Generally speaking, I think the report is spot on. It really addresses the core problems/opportunities related to data literacy that UGA is facing and it gives some very viable and realistic options on addressing those problems/opportunities. Luckily, some of the findings are already things that we are working on as an institution, so at least our findings are consistent. I also think it presents a good number of things, like the idea of additional trainings and a "data driver's license" structure that can be further built out to bolster our data literacy efforts. I also think that this report is something that I can share widely across the institution and get buy-in from invested units.

All-in-all, I think that this is a great set of recommendations that really got at the core question that we were attempting to address. I appreciate everyone's work on the project.

Emily also asked is we needed to do a formal presentation of the findings. I personally don't think so, as this 5-pager is exactly what I was expecting and it effectively communicates the findings. However, if you all want to get together to do a "debrief" I am happy to set something up.

Thanks,

Paul
