

# Store and retrieve (rights) information using ebook watermarks

BooXtream ebook watermarking and personalisation  
enhanced for ARDITO

Huub van de Pol, CEO at Icontact BV [huub@icontact.nl](mailto:huub@icontact.nl)  
London, 9 April 2018

This project has received funding from the European Union's Horizon  
2020 research and innovation programme under grant agreement No 731760

# Existing technology:

## BooXtreem ebook watermarking

- **Transactional:** unique, hidden codes are inserted into the ebook file during a (sales) transaction. The codes are linked to transactional (meta)data, stored in a central database
- **Redundant:** multiple code occurrences in the same ebook; tamper proof
- **Multiple algorithms:** content dependent, algorithms can be changed, updated, improved; difficult to reverse engineer

→ *Tough, persistent watermarks carry information, survive several ebook manipulations, hard to hack*

# Use cases for watermarking in ebook publishing

- Ebook **publishers** use BooXtream to create personalised advanced reader copies, review copies for journalists, authors - *'Manual / ARC Watermarking'*
  - Ebook **distributors** use BooXtream to create unique, traceable master copies of the ebooks in their supply chain to web shops, platforms and ecosystems in order to trace 'embargo leaks' - *'Channel Watermarking'*
  - Ebook **web shops** and publishers selling ebooks direct to consumers (D2C) use BooXtream to protect the ebooks. *Watermarking copy protection (aka Social DRM or Soft DRM)* instead of DRM improves accessibility and UX.
- *Watermarking enables personal ebooks, traceable ebooks, less illegal copying, reduced piracy, improved accessibility*

## Encoding data in

information

# ARDITO and BooXtream (1)

## EMBEDDING WATERMARKS:

- The existing BooXtream API will be enhanced to support additional ARDITO metadata, like **ebook rights and licensing (DRS) data and DOI**
- Onboarding an ebook in the BooXtream repository automatically creates a **HubKey** for use by **The Copyright**

## Hub plug-in

- This data is added to the other transactional data used for the **invisible** ebook watermarks
- The rights information will also be inserted into the ebooks in a human readable (**visible**) form.
- Rights and license information can be **updated** after the ebook has been sold.

→ *An ebook can carry and deliver rights information to its*

# ARDITO and BooXtream (2)

## DECODING WATERMARKS:

- When an ebook is uploaded by (or found by) the Copyright Hub site, their **webbrowser plug-in**, or eg. a crawler, the ebook is decoded by BooXtream.
- The watermark is **decoded**.
- The license information will be **shown**.
- The end user is directed to the best place to **obtain** a license

→ *Content 'found in the wild' can point to the ebook owner, publisher, webshop*

# ARDITO and BooXtream: this summer

## AUTOMATIC ONBOARDING:

- New BooXtream customers will be able to automatically onboard their ebooks in The Copyright Hub
- The Copyright Hub webbrowser plug-in can be used to ‘decode’ the hidden data in an ebook and show the relevant rights information

→ *The ARDITO tools will be available for all BooXtream customers*

# ARDITO and BooXstream: the next steps

## DECODING FINGERPRINTS:

- When a text (fragment) is uploaded using the Copyright Hub browser plug-in, BooXstream can find the related source ebook that **contains the text**.
- The fingerprint is **decoded** and the essential rights information and license information will be **shown**.
- The end user is directed to the best place to **obtain** a license

→ *Texts can be linked to the source ebook, even without an embedded watermark*

# ARDITO / BooXtream benefits

The aim of the ARDITO project:

*To help professional digital content owners, like self-publishing authors, publishers, or photographers, to optimize the legal (re)use of their assets.*

*ARDITO enables any end user who wants to re-use (parts of) the content to obtain the necessary and up-to-date license and / or a legal copy.*

ARDITO is relevant for

- Self publishing authors
- Educational (re)use of existing content
- Monetizing preview copies
- Monetizing web publications with excerpts of ebooks

# Thank you!
