

Spatial Data to Inform Ecosystem Service Assessments for a More Resilient Gulf Coast

A Workshop Series sponsored by NASA

Purpose To provide opportunities for Gulf Coast planners and resource managers to find improved ways to use ecosystem service information for decision-making toward a more resilient Gulf Coast

Background The Balmoral Group has partnered with NASA and The Nature Conservancy to explore how NASA data products can improve the valuation of ecosystem services. A series of 5 workshops, 1 in each of the Gulf Coast states is being conducted to explore the application of earth observations and other spatial data to ecosystem service assessment and to learn from stakeholders about the data and methodologies needed to improve coastal management decisions.

Who should participate? NEPs, NERRs, Natural Resource Managers, State environmental and coastal agencies, Sea Grant, Consultants/Engineers
