

Migration to the AWS Platform

ZOPA

The Challenge

HeleCloud has been working with Zopa, the pioneering financial services company. In early 2017, Zopa began a programme to migrate large parts of its mission critical systems from hosting facilities to the AWS Platform. As part of the programme, Zopa is also re-architecting its core applications to further improve performance, availability, and scalability, and better meet the requirements of the fast-growing business in the Cloud.

The Solution

HeleCloud's focus has been on Cloud Architecture, Automation, Security, Compliance and Project Management. The programme started by analysing regulatory and business compliance requirements, including by the UK financial services regulator - the FCA.

The Results

The Zopa and HeleCloud architecture and engineering teams established high level designs and reference architectures for all Zopa environments, followed by implementation.

“HeleCloud has been a trusted, competent, and results-orientated partner.”
