CRITICAL CARE BOOT CAMP

Build your own boot camp to address the critical care education needs specific to your staff! This two-day course runs from 8am-4pm each day. The course outline will be tailored to YOUR staff and patient care needs using audience response technology for highly interactive class participation.

COURSE OBJECTIVES

- State 3 rapid interventions in the stabilization of a hypotensive patient.
- Recognize the most common causes of arterial blood gas abnormalities.
- Assess the 3 most common arrhythmias using rhythm strip interpretation.
- Contrast the difference between hypovolemic shock, septic shock and cardiovascular shock in both assessment and treatment priorities.
- Prioritize ways to increase the ventilator patient’s oxygenation status.
- Compare the differences between a STEMI and NSTEMI and unstable angina
- Summarize the difference between preload, contractility and afterload as components impacting cardiac output.
- Identify correct locations for measuring CVP, arterial lines and pulmonary artery waveforms.
- Identify normal and abnormal hemodynamic waveforms.
- Differentiate between hypotonic, isotonic and hypertonic IV fluids
- List three common causes of delirium.
- Identify three steps in managing the patient on a ventilator
- Describe the initial steps in the management of the neuro patient with stroke
