

# JTAX DATA SOVEREIGNTY POLICY

---

## **National Data Sovereignty**

J Tax stores all customer data and backups of this data securely within our data availability zones in Australia. All disaster recovery systems are also located within our availability zones in Australia.

We strive to build-in the following practises:

- data is being identified, classified and protected both physically and electronically;
- any person who may handle or manage the data has appropriate security clearances;
- there is a defence-in-depth strategy in place;
- threat detection and response, not just data protection, is practised; and
- the three postulates of security (confidentiality and privacy, integrity and availability) are being enforced.
