

Adama Technologies Corp. (ADAC)

COMPANY OVERVIEW

Adama Technologies Corp. (OTC PINK: ADAC) is a venture capital and business development company that owns, operates as well as invests in tech companies.

Adama's flagship investment is a company called Alpine Industries located in Utah that specializes in machining and aerospace manufacturing. This recent investment and acquisition launches Adama into the fast expanding field of aerospace technology and also positions Adama with the stability of being a defense contractor for the United States military. Alpine Industries was formed in 1974 and has manufactured several hundred parts including the aerospace landing gear, the M1 Mine Clearing Blades, 60 ton jacks for the C5A, AIM-9 missile body trainers, drag links for the F-16 fighter planes, landing gear parts and assemblies as well as numerous other components for United States military systems. Presently Alpine is manufacturing parts for 25 separate United States military contracts.

This acquisition sets Adama Technologies apart from the numerous other tech venture funds around the market place, providing it the stability and growth opportunities that come from having a company with more than forty years of history as its staple, cornerstone operation. In addition to acquiring Alpine, Adama has been able to maintain the core management team, engineers and developers while adding additional sales and management personnel to strengthen the sales, marketing and growth potential.

INVESTMENT HIGHLIGHTS

Large End Markets. Alpine's forty plus years of experience and more than 100 United States military contracts give the company great reach and ability. Additionally, the company is broadening its focus and plans to engage foreign military as well as private aerospace companies to increase sales and expand its customer base. The company owns and operates from its 10,000 square foot manufacturing facility in Richmond, Utah, giving it more than adequate opportunity for growth and increased manufacturing capability.

Differentiated Approach. Adama has added additional executive oversight to the already successful operation, giving the company an additional 100 years of business development and growth experience. This team is leading the expansion efforts and creating the focus on additional customer growth. Already Alpine has experience in creating parts and technology utilized in rollercoasters, motorcycles, zip line parts, crash pads as well as drilling carts in the oil industry. This past experience is being utilized to market Alpine to a variety of new markets and drastically expand the sales forecast in the upcoming 12 months.

Numerous Barriers to Entry. Adama's business model has numerous barriers to entry including the significant upfront development cost associated with the new technology development and investments, as well as a crowded marketplace that is dominated by big names including Google, Facebook and Microsoft. These barriers, however, are mitigated by the micro niches that Adama seeks to find, acquire and develop. This niche strategy is best seen in the Alpine Industries acquisition, and the success being realized in that acquisition is the greatest indicator of future success and growth potential. The Alpine acquisition also validates the corporate strategy and provides the company with a blueprint for future acquisition and development opportunities.

Near-term Commercialization. The Company plans to launch its expansion growth and marketing plan in March of 2017, however, the current revenue and cash flow is already benefiting the company and strengthening its balance sheet. Alpine currently has more than One Hundred Eighty Thousand Dollars (\$180,000) of receivables for work already completed as well as additional production that is occurring on a daily basis. This means the company has already begun generating revenue as early as the fourth quarter of 2016. Investors now have the opportunity to get involved with the stock just before the tipping point occurs.
