**Re: Opinions On Previous Installations**

To Whom It May Concern,

I work as a Technical Sales Manager for Saint Gobain PAM and have been working alongside Fitzpatrick Mechanical Services Ltd (FMS) at some of their recent projects – namely 1 Bank Street in London, 3T's Hospital in Brighton, 20 Hanover Square in London and 1-3 Grosvenor Street in London.

I have personally conducted site inspections at the aforementioned projects and can firmly say that the level of precision and detail witnessed at every site was above reproach. No advice was ever given on any inspection reports as all fittings were installed expertly. FMS are extremely forward planning so from a manufacturers perspective it allows us to forward plan and adjust our production to suit tight delivery schedules ensuring that there are no delays on site.

Working with such a forward-thinking and adaptable company has even allowed us to bring some time and money saving products to the market which previously never existed.

Before my time with Saint Gobain PAM, there had already been a working relationship built, namely at the landmark project – 20 Fenchurch Street aka The Walkie Talkie – where FMS demonstrated their keen level of detail and prowess when installing large scale, premium drainage systems in ultra-high-end prestigious properties.

I would be more than happy to discuss in person some of the work I witnessed and can be contacted at [Carl.Stevens@Saint-Gobain.com](mailto:Carl.Stevens@Saint-Gobain.com).

Sincerely,

**Carl Stevens**  
**Technical Sales Manager**
