- Read and challenge Owners Engineers interventions log and Monthly Reports
- Check the EPC Contractors compliance with the Contractual expected quality plans, quality assurance
- Track complete overview of existing issues and their potential solutions for recommendations and effective resolution
- Overall responsibility to ensure HSE performance for the project and that contractors meet the required standards by carrying out inspections on site
- Correlate on ground project progress to aspects of budget and schedule for reporting
- Collaborate with engineers, trade workers and other construction specialists to find optimum solutions
- Manage contractor communication, timely receipt of delivery items and oversee subcontractor activities while providing interface for various other civil activities
- Respond to work delays, emergencies, and other ad-hoc problems
- Comply with legal requirements, safety codes and other regulations
- Keep a register of every actionable item to be handed over to the operations team at completion
- Approve changes in scope of work for contractors
- Document and verify the technical background for claims with contractors and the Project while maintaining a daily log of events for contractual discussions and disputes later
- Ensure contractors invoices are correct and deliverables received prior to payment with the use of Owners Engineer
- Provide inputs to the Project Services Manager and other stakeholders (Lender's Technical Advisor, Sponsors, Owner's Engineer) and the reports published for civil related topics
- Responsible for the civil milestones & civil project budget
- Approve revised reference plan, reported progress and civil project report monthly
- Provide updated key milestones on a monthly basis and a report on key events that affects the schedule
- Establish and implement risk monitoring, identifying, and escalating for the civil scope of the Project
- Evaluate the consequences of risks on cost and plan (consequence for activities)
- Agree on documentation filing procedures, delivery during handover, production monitoring including SCADA, IT requirements for the facility, creation of spare parts register, material lists with operations readiness teams
- Provide all documents required for governmental and invoice approvals

EXPERIENCE AND SKILLS

- Demonstrate strong experience as Construction Manager for large renewable development projects
- Excellent problem-solving skills
- Have a self-motivated and result oriented mindset
- Ability to deal with ambiguity and find creative resolutions
- Ability to effectively manage multiple stakeholders with a proactive mindset
- Strong decision – making skills including the ability to balance conflicting interests
- Excellent communication and presentation skills, both written and oral
- Have proficient computer skills of MS office package and project scheduling software (e.g. MS Project, Primavera)
- Fluency in English is required; Ukrainian and/or Russian are an advantage

QUALIFICATIONS

- Bachelor's and/or master's degree in related technical discipline
- 9+ years of proven and relevant experience within renewable energy projects

BENEFITS

- Being part of fast-growing project delivery consultancy and working at various projects globally
- On-going training and development will help grow your potential
- Opportunity to work on frontier and large-scale developments globally
