

PLANET POWER RIVERINA

HEALTH AND SAFETY CHECK PROGRAM

DETAILS

The health and safety check has been designed to keep your system in top condition with a 30-point safety check to ensure your panels, components, cables, and performance are maintained in top condition.

Regular service on your system is recommended by the industry's peak body the Clean Energy Council of Australian. All health and safety check reports and photos are maintained so we can build a profile of *your systems* performance over time. This data will form an important database of information about your system should you ever wish to increase the number of panels or intend on to move towards solar power storage over the coming years.

PRICE

The new fee structure has been designed with the same philosophy used in our solar panel pricing. One price and no more to pay. It incorporates a comprehensive panel check, 30-point safety check, performance review and general clean of your panels and power box. We have invested in the latest panel cleaning technology and use filtered ionized water on your system's panels.

System Size	Cost*
1.5kw	\$120
3kw	\$160
5kw	\$230
8kw	\$275
10kw	\$315
Over 10kw	<i>Price on Application</i>

Note: if your solar panels are located on a second story or high pitch roof we do charge and additional \$50 WHS surcharge. This is to cover the additional safety precautions for our staff.

TO BOOK A HEALTH AND SAFETY CHECK

Please contact Planet Power Operations on 02 69395959 or book through the Website www.planetpowerriverina.com
