Contact your School's Registration Office with questions.

Created and Sponsored by:
UMB Community Collaborative on IPV

The Community Intimate Partner Violence Collaborative aims to study, understand, and respond to the problem of intimate partner violence (IPV) and strengthen education, awareness, early intervention, and prevention of IPV throughout the UMB academic and practice communities.

Did you know...?

- Women who have experienced IPV in their lifetime were more likely to report having **asthma, diabetes, frequent headaches, chronic pain, poor physical and mental health?**
- Head, neck and orofacial wounds, fractures, and injuries account for **3 out of the top 10** primary diagnoses for IPV emergency department visits.
- **Substance abuse and high-risk alcohol** use are more prevalent among women who experience IPV compared to women who have not experienced IPV.
- Female survivors of IPV are at increased risk for suffering **serious mental health problems** that can continue years after the abuse has ended.
- Between 2006 and 2010, **46% of crimes** involving intimate partner violence were **not reported to police**.
