Manage  
and secure your PCs  
and mobile devices—  
from the cloud.

## HOW MUCH CAN WINDOWS INTUNE SAVE YOUR BUSINESS EACH YEAR?

According to an IDC study<sup>1</sup>, the cost savings of using Windows Intune can be substantial:

IT costs associated with managing and securing PCs: **U.S.\$521**

User productivity savings: **\$63**

Reducing use of other tools: **\$118**

Total: **\$702**  
per PC each year

*"By using Window Intune, we can save \$20,000 a year in malware costs and \$50,000 in Windows 7 licenses for staff at headquarters. That's money we can funnel back into field programs that benefit children."*

*—Ken Supersano, Senior Director of Technology, Save the Children U.S.*

*"We subscribed to Windows Intune and it saved us money because we could retire third-party tools and reduce licensing costs. Now I'm saving time by using only one tool to manage and secure our PCs."*

*— Hakan Kutlug, Head of Information Technology, goetzpartners*

Mobile employees. Remote workers. PCs and laptops. Smartphones and tablets. How do you manage them all—and make sure users and your network are protected? Windows Intune can help.

Windows Intune helps businesses keep their Windows-based PCs and mobile devices well-managed and more secure from virtually anywhere with cloud-based management tools, reports and an upgrade license to the latest version of Windows. Windows Intune helps users to securely access targeted applications for the devices they use to get work done.

With Windows Intune, you'll get the latest features automatically, as long as your subscription is active. And with a simple, monthly payment, you get a predictable monthly expenditure. It all adds up to big tech results with a small tech investment. You'll be able to:

- Get help managing and securing PCs virtually anywhere
- Balance control with flexibility for your mobile devices
- Drive efficiency and reduce complexity

## What makes Windows Intune unique?

Windows Intune is a comprehensive solution that helps businesses of any size manage and secure user devices. It brings together Windows Intune cloud services and a Windows upgrade subscription to help you simplify your PC management. Then, it extends management to mobile devices, so that users can remain flexible—without compromising security.

You can manage and help protect PCs with an internet connection and the Windows Intune client installed on each PC you wish to manage. And because Windows Intune integrates with Microsoft Exchange Active Sync, you can also administer mobile devices, whether it's enforcing PIN set and encryption or enabling remote wipe. IT gets the ability to remotely perform security and management tasks through a web-based console. Users get access to the applications and tools they need to stay productive through a portal. And everyone knows that the PCs and mobile devices they're using are managed.

Windows Intune also makes it easy to standardize your business on the latest version of Windows—complete with added security features and easier management—by including upgrade rights as part of the subscription. And because Windows Intune includes a financially backed, 99.9 percent scheduled uptime service level agreement and best-in-class support around the clock, you can have confidence that your service will be there when you need it.

In addition, Windows Intune is very flexible. For instance, you can use it to help manage and protect all the PCs in your company, or just the hard-to-reach devices of distributed workers, non-domain joined PCs, field employees, or recent acquisitions. You can set up custom notifications to alert you when there's a problem, and get better control over remote PCs by forcing restarts, deploying policy updates, or scanning for malware—and then run and save your own reports. You can even deploy licensed Microsoft and third-party software to remote PCs, and track hardware and licensed software\*. Windows Intune is easy to use for in-house IT professionals—or you can take advantage of more than 10,000 Microsoft partners to help you administer your Windows Intune account.

*The Windows Intune web-based console gives you immediate insight into your PC and device environment with the ability to view malware status, alerts, security policies, updates, and more.*

## What are the benefits of Windows Intune?

### Help manage and secure PCs anywhere—promptly.

Get fast online security and management.	Manage and secure your Windows-based PCs with almost immediate effect, whether your IT staff or end users are in the main office, at a branch office, or on the road.
Distribute software.	Deploy most of your licensed software to PCs located nearly anywhere using the cloud. Plus, you can use your existing Active Directory® structure to provide users with software personalized to their role, ensuring they have the tools they need to be productive.
Set security policies.	Centrally manage update, firewall, and endpoint protection policies, even on remote machines outside the corporate network.
Protect PCs from malware.	Help protect your PCs from the latest threats with centralized endpoint protection. You can remotely initiate on-demand malware and update scans, forced restarts, or malware definition updates to take the extra step helping ensure your PCs are well-protected from potential threats.
Manage PC updates.	Centrally manage the deployment of updates to Microsoft® and most third-party software, keeping the applications your workers need current.
Proactively monitor PCs.	Receive alerts on updates, threats, offline PCs and more so that you can proactively identify and resolve problems with your PCs virtually anywhere.
Provide remote assistance.	Help resolve PC issues, regardless of where you or your users are located, with remote assistance.
Take advantage of advanced security in Windows 7 Enterprise.	Better protect confidential data with BitLocker® and BitLocker To Go® in Windows 7 Enterprise.

### Empower your users without excess cost and increased risk.

Manage users and devices using Windows Intune.	Link your on-site Active Directory Domain Service (ADDS) to the Microsoft Online directory service so that your user accounts and security groups can be synchronized with Windows Intune.
Manage business devices—and your users' personal devices.	Integrate Microsoft Exchange ActiveSync with Windows Intune to gain the flexibility to manage many devices brought into the workplace, even if not owned by your organization.
Ensure the security of your mobile and non-corporate devices.	Enforce PIN set, encryption and enable remote wipe to help ensure that mobile devices are secure.
Empower users to get the applications they need for the device they are using.	Reduce the IT burden for managing non-corporate and user-owned devices by providing an IT-defined selection of applications for download from the Windows Intune self-service portals, targeted to the user profile.

### Drive efficiency and reduce complexity.

Upgrade to future versions of Windows.	Use upgrade rights to get the latest Windows experience while never worrying about purchasing upgrade licenses while your subscription is active.
Standardize on the Windows you want.	Reduce the cost associated with managing multiple versions of the OS and standardize your PC environment on a single Windows platform.
Reduce help desk calls.	Take advantage of the latest Windows features—like Windows Troubleshooting and Steps Recorder—to resolve issues quickly and with as little impact as possible on users and your help desk.
Track PC hardware and software assets.	Get a more efficient way to manage the PC hardware, software, and mobile devices you use with Windows Intune, so you can more efficiently manage assets, licenses, and compliance.
Manage your licenses.	Manage Microsoft Volume License Agreements and other license agreements to track how many licenses you've purchased against what you've installed.*
Optimize your bandwidth.	Take advantage of peer caching technologies with Windows 7-based PCs to improve software download times and optimize Internet bandwidth usage. Internet bandwidth usage.
