Ferrania	In Production	Film Ferrania is an Italian company currently manufacturing new E6 still films. Via Kickstarter and government assistance some of the original members got together and raised the defunct, crippled 1923 factory from a somber fate. They should be ready sometime in 2016. Future plans to make more roll and sheet film formats look promising.

*Notes	Fuji Velvia 50 in 4x5 & 8x10 is still made for the Japanese market. If you want it expect to pay at least twice what it was worth over here. 620 film is available at B&H Photo. 620 film is 120 film re-spoiled onto thinner cores used in older 620 cameras. Technically you can spool any 120 film onto 620 cores if you've got the time and patience.
